Article Revision Letter for Authors - (VETWORLD-2021-11-663)

Dari: Veterinary World (noreply@ejmanager.com)

Kepada: sgh_undip@yahoo.co.id

Tanggal: Selasa, 8 Februari 2022 14.59 WIB

Dear Sugiharto Sugiharto,

Your manuscript entitled "Growth performance, blood variables and intestinal ecology of broilers supplemented with Lactobacillus casei-fermented mixture of red rice and aromatic ginger" (Ms.Nr. VETWORLD-2021-11-663) was reviewed by reviewers of the Veterinary World. As initial decision, your manuscript was found interesting but some revisions have to be made before it can reach a publishable value. Please refer comments given at bottom.

You should send your revised manuscript via the online system of ScopeMed on <https://ejmanager.com/my/vetworld/>.

Sincerely yours,

Editor-Veterinary World

COMMENTS for Authors:

EDITORIAL COMMENTS:

- Highlight all corrections/additions in red color font in revised manuscript.
- Please answer all the comments below point-by-point in an accompanying response letter to your revised submission and include your responses at appropriate paragraphs in the revised word file.
- Include all authors name, affiliation, ORCID and email address in revised Word file as per format and style of Veterinary World. Please check latest article from www.veterinaryworld.org for format of this section.
- All reference no. in the text must be in continuous no. as per style of Veterinary World and amend the reference section accordingly if you have not done it.
- Please divide the introduction into 3 paragraphs if you have already not done. Introduction must be divided into 3 paragraphs i.e., 1. introduction 2. significance of the study and 3. aim of the study.
- Include authors' contributions (refer just below the conclusion section in latest article from www.veterinaryworld.org for format of this section) if you have not added.
- Include Acknowledgements along with source of fund for this study if you have not included.
- All journal names in references must be as per standard journal abbreviation.
- If you will not revise strictly as per suggestion then there will be chance of rejection. So, revise carefully. If you have any query then please email to Editor-in-Chief.

Dear Authors,

Please find some recommendations on the article file.

Corrected Document (Click OR copy+paste link) : http://www.ejmanager.com/mnstemp/2/doc/2-1638175007_BYREV-60994.docx?t=1644307070

=> Reviewer # 2

This is the review for the manuscript 2-1638175007, entitled Growth performance, blood variables and intestinal ecology of broilers supplemented with Lactobacillus casei-fermented mixture of red rice and aromatic ginger for Veterinary World Journal.

The present manuscript presents original data, which has been collected using appropriate standard methods. However, Major concerns still need to be addressed or clarified.

General comments:

It is important to proofread this manuscript by a native English speaker.

Writing style should be formal from the third-person perspective. Do not use "our". Please check the whole manuscript.

Specific comments:

Lines 66-80: Analysis methods of dietary proximate composition are not provided.

Lines 90-94 and Table 1: Does this diet cover the nutritional needs of Lohmann broiler chicks? Reference is required.

Lines 95-97: More details on management system are required [photoperiod regime, temperature range, humidity %].

Lines 127-133: Statistical analysis is poorly described. Does data meet the assumption of homogeneity of variances? Clarify if authors run a homogeneity test. What is the type of ANOVA? Mean separation are not appropriate for a quantitative independent variable such as graded levels of an ingredient. A more appropriate analysis is to analyze all of the responses using polynomial orthogonal contrasts to see whether there are significant linear or quadratic responses.

Line 250: Authors recommended using dietary FERMIX at 0.5% to improve physiological status and intestinal health and morphology of broiler. The best option to determine the optimal dose or level is polynomial regression analysis

Lines 250-251: The conclusion is very short and general. Please write the conclusion in a more accurate way, showing the important results.

Suggested file in addition to above comments:
