#### Abstract

This study seeks to analyze the effect of logistics management carried out by warehouse operators, the facilities and access provided to support storage, and the competitiveness of storage costs on the use of warehouse financing by suppliers in Central Java, Indonesia. The sampling method was purposive random sampling. The numbers of respondents involved in this study were 120 suppliers and farmers producing first-rate agricultural products and who are users of warehouse receipts in the Central Java region. By using linear regression analysis with assistance, the study results found that the variables of logistic management, facilities and supply chain access as well as competitive storage costs have positive and significant effects on the use of warehousing financing by suppliers and farmers who use public warehousing. This result confirms that the more precisely warehousing is managed, the higher the level of trust of users involved in the logistics business and supply chain of agricultural products to use additional services in the form of warehouse receipts to support the sustainability of agricultural businesses. © 2021 by the authors; license Growing Science, Canada.

#### 1. Introduction

Stakeholders and the Indonesian government continue to strive to encourage increased competitiveness of national trade and economic growth in Indonesia by optimizing the role of logistics industry facilities in the country. Optimization of competitiveness and fulfillment of demand for agricultural products in the country is carried out by streamlining supply chains between regions. Rexhausen et al. (2012) stated that distribution is the most important element in the relationship activity between customers and the company's internal supply chain. Here, the supply chain is important to be carried out effectively and efficiently considering the risk of scarcity of raw materials for the continuity of domestic industry and trade. According to Edi et al., (2019), the supply chain for food commodities requires a mechanism of integration and connectivity between stakeholders in order to obtain optimal benefits for each stakeholder. The food supply chain, especially agricultural products in Indonesia, experiences complexity due to the interconnection network of suppliers / farmers, collectors, wholesalers, exporters and industry (Berland et al., 2014). According to Edi (2019), stakeholders involved in the warehouse receipt system to support the supply chain are managers, supervisors and registration bodies, which play an important role in the warehouse receipt system that provides storage services for goods and integrates the supply chain of agricultural products from upstream to downstream. In terms of regulations, to support an effective supply chain and support food security while ensuring the sustainability and welfare of suppliers and farmers, the government through Law Number 9 of 2011 concerning the Warehouse Receipt System developed an idea to secure warehouse receipt securities as Asset Backed Securities. The importance of supporting warehouse financing such as this receipt was also reinforced by Wu et al., (2010) who argue that disruption to the assurance and trust of stakeholders involved in the supply chain can result in the supply

# The impact of transformational leadership on individual academy performance through knowledge sharing

#### Thi Minh Thu Vu<sup>a\*</sup> and Khashayar Yazdani<sup>a</sup>

<sup>a</sup> Malaysia University of Science and T	echnology, Malaysia
CHRONICLE	A B S T R A C T
Article history: Received December 15, 2020 Received in revised format January, 15, 2021 Accepted January 17 2021 Available online January 18 2021 Keywords: Transformational leadership Knowledge sharing Individual academic performance	The objective of this paper is to evaluate the impact of transformational leadership on individual academy performance through knowledge sharing, organizational learning, organizational commitment in higher education Vietnam. The study conducts the research on 500 lecturers at 10 universities in Vietnam. The study uses Smart pls 3.6 software to analyze the data. The results show that transformational leadership had a positive effect on knowledge sharing, organizational learning and organizational commitment. Ultimately, employee engagement and social support play a moderate role in the relationship between transformational leadership and knowledge sharing statistically. However, organizational learning and organizational commitment did not play any mediate role on the relationship between transformational leadership and knowledge sharing.

#### 1. Introduction

Knowledge plays an important role in the development of organizations at all levels. In economic growth models, besides physical capital, human capital is one of the central factors that determine the economic growth rate of each country (Barro, 2001; Krueger & Lindahl, 2001). Similarly, at the micro level, knowledge is the fundamental factor, creating a competitive advantage that contributes to the sustainable development of all organizations, especially in the context of globalization and revolution 4.0 (Bock et al., 2005; Cabrera et al., 2006; Dixon, 2000; Foss et al., 2010; Ghobadi, 2015; Ipe, 2003; Parke et al., 2014; Wang & Noe, 2010). Ipe (2003) identified knowledge as a strategic resource in organizations, determining the success of the organization. Knowledge is the foundation of the competitive advantage of all organizations (Bock et al., 2005). Accordingly, building an effective knowledge-sharing mechanism is essential for the development of organizations (Damodaran & Olphert, 2000; Dixon, 2000; Parke et al., 2014; Wang & Noe, 2010). Dixon (2000) stated that two main activities related to knowledge are knowledge creation and knowledge sharing. In order to effectively utilize the power of knowledge, organizations must understand how knowledge is created and how knowledge is shared within the organization (Dixon, 2000; Ipe, 2003). Therefore, knowledge sharing is just as important as knowledge creating. In addition to encouraging the creation of new knowledge, organizations need to focus on effectively exploiting the available information sources within their internal through knowledge sharing (Damodaran & Olphert, 2000; Wang & Noe, 2010). Effective knowledge sharing between employees and teams allows for the optimal exploitation of knowledge resources within the enterprise (Damodaran & Olphert, 2000). Furthermore, effective knowledge sharing among employees within the organization contributes significantly to innovation - the basis of a competitive advantage for the organization (Jackson et al., 2006). In addition to doing well in recruiting and selecting employees with high qualifications in expertise and experience, organizations need to focus on building incentives for effective knowledge transfer and creativity (Dixon, 2000; Parke et al., 2014; Wang & Noe, 2010).
