Catatan Penilaian artikel oleh Reviewer :

1. Kesesuaian dan kelengkapan unsur isi jurnal:

Unsur isi jurnal sudah lengkap sesuai dengan tata cara penulisan yang memuat Title, Introduction, Materials and methods, Results and Discussion, Conclusion, Acknowledgement dan References. Substansi artikel sesuai bidang ilmu penulis pertama.

2. Ruang lingkup dan kedalaman pembahasan:

Substansi artikel yaitu tentang telah sesuai dengan ruang lingkup jurnal, dengan kedalaman pembahasan sangat baik

3. Kecukupan dan kemutakhiran data/informasi dan metodologi:

Data-data hasil penelitian sudah menunjukkan ada kebaruan informasi. Pustaka -pustaka yang diacu sesuai dengan tema penelitian dan sebagian besar pustaka adalah mutakhir.

4. Kelengkapan unsur dan kualitas terbitan:

Jurnal ini tergolong jurnal internasional dengan editorial board lebih dari 4 negara, Kontributor lebih dari 2 negara, unsur dan kualitas terbitan sangat baik gambar dan simbol jelas terbaca. Indikasi plagiasi dengan Cek Turnitin: Similaritas = 6 % yang artinya jurnal ini bukan hasil plagiat.

Automated MTF measurement in CT images with a simple wire

Abstract

We validated the tail replacement technique in the modulation transfer function (MTF) calculation of CT images using edges of homogeneous and non-homogeneous phantom using an automated method. The algorithm for the automated MTF calculation consists of several steps. The upper edge of the phantom was detected from its axial image and pixel values were taken to create an edge spread function (ESF). The left tail of the ESF was flipped horizontally to replace the right tail. Differentiating the ESF produced a line spread function (LSF) which was Fourier transformed to produce the MTF. To validate the result for the non-homogeneous phantom was compared with that for a homogeneous phantom. Results showed that in the homogeneous module, the MTF curve generated without tail replacement corresponded to its shape in use. However for the non-homogeneous module, the MTF obtained without tail replacement differed considerably from its shape in use. The 50% value of MTF (MTF-50) without tail replacement was 0.44 cycles/mm compared to 0.33 cycles/mm in use. Using the tail replacement, the MTFs in the homogeneous and non-homogeneous modules were comparable, with MTF-50 values of 0.33 cycles/mm for both. In summary, the MTF cannot be conventionally measured from the edge of the non-homogeneous module, but it can be resolved using the tail replacement technique on the ESF curve. © Published under licence by IOP Publishing Ltd.

Preface

The 18th Asia-Oceania Congress of Medical Physics (AOCMP) in conjunction with the 16th South-East Asia Congress of Medical Physics (SEACOMP) was held in Kuala Lumpur from 11 to 14 November 2018. The annual event is aimed to gather medical physics communities in the Asia-Oceania region for the sharing of knowledge, expertise, scientific discussions, cultural exchange and updates of medical physics activities. Besides, the event is a platform for the establishments of regional education, training and professional developments in medical physics and for the advancement in status and standard of practice of the medical physics profession in the region. The theme for this congress is “A Sustainable Future for Medical Physics”. This is the second time the congress is held in Malaysia. The first AOCMP organised in Malaysia was in year 2004.

300 abstracts from 28 countries were accepted for the congress, 151 were oral contributions and 149 were posters. The congress also had many invited lectures by international and local experts. The congress was divided into three main themes; imaging, therapy and others (including radiobiology and radiation protection).

83 papers are included in this proceedings volume organised into the three main themes (1) imaging: CT dose optimisation & image quality, non-ionising imaging, nuclear medicine imaging, radiography, mammography and tomosynthesis; (2) therapy: radiotherapy dose verification, radiotherapy image guidance & motion management, quality assurance & commissioning, treatment planning, particle therapy, brachytherapy; and (3) others: medical physics education, radiation detector, radiation protection & safety, radiobiology & biophysics.

All articles published in this volume of Journal of Physics: Conference Series have been peer reviewed through processes administered by the proceedings Editors. Each article was peer-reviewed by at least two reviewers from the scientific committee and appointed reviewers based on their field of expertise. Reviews were conducted by expert referees to the professional and scientific standards expected of a proceedings journal published by IOP Publishing.

Many thanks to all invited speakers, oral presenters and poster presenters for their participation and to the Organising Committee members for all their hard work in making the congress happen. Thanks to all authors who submitted the manuscript of the work presented at the congress to be included in the volume. The Scientific Committee members and reviewers are also thanked for reviewing the submitted manuscripts and improve the scientific quality of this proceedings. Finally, thanks to all who attended the congress and the sponsors for their financial support.
