Catatan Penilaian Paper oleh Reviewer:
Negara penerbit jurnal Belanda, Q2/Q3 (2019). Similaritas dianalisis tetapi hasilnya tidak disertakan. Topik publikasi sesuai kompetensi Pengusul. Kadar N dan P di air laut 3 lokasi studi yang berdekatan dengan usaha budidaya-laut sudah berada jauh di atas ambang batas bakumutu MenLH no. 15/2004 (Tabel 1) dan di ketiga lokasi terdapat 6 penyakit karang (Gb. 3). Tetapi ternyata korelasi antara N dan P air laut tidak signifikan (r= 39.4% dan 42.2%) terhadap prevalensi penyakit-penyakit karang tersebut. Hal ini dinyatakan sendiri berlawanan dengan hasil peneliti-peneliti di negara lain, namun argumen dalam pembahasan hanya menyebutkan karena jumlah sampel kualitas air terlalu sedikit dan bahwa penelitian ini bersifat asesmen cepat kondisi lingkungan. Gb. 5 mengorelasikan prevalensi penyakit karang terhadap konsentrasi N dan P, tetapi simpulan menyatakannya sebagai luas tutupan karang.
Dipublikasikan di jurnal internasional bereputasi tinggi, pustaka yang diacu banyak, namun hanya 33% yang digunakan membahas hasil.
