Hasil Penilaian *Peer Review* :

Komponen Yang Dinilai	Nilai Maksimal Jurnal Ilmiah			Nilai Yang Diperoleh
	Internasional/ Internasional bereputasi	Nasional Terakreditasi	Nasional	
	v			
a. Kelengkapan unsur isi Jurnal (10%)	3			3
b. Ruang lingkup dan kedalaman pembahasan (30%)	9			5
c. Kecukupan dan kemutahiran data/informasi dan metodologi (30%)	9			6
d. Kelengkapan unsur dan kualitas penerbit (30%)	9			5
Total = (100%)	30			19
Nilai Pengusul = $40\% \times 19 = 7,6$				

Catatan Penilaian Jurnal Oleh Reviewer :

- a. Kelengkapan unsur isi Jurnal : isi jurnal lengkap, terdiri dari judul, abstrak, pendahuluan, metode penelitian, pembahasan, kesimpulan & daftar pustaka (references).
- b. Ruang lingkup dan kedalaman pembahasan : pembahasan berfokus pada perkembangan peraturan perlindungan hak penyandang disabilitas mulai dari aspek HAKA hingga pengaturannya di Indonesia khususnya pada industri penerbangan di Indonesia. Kedalaman pembahasan cukup.
- c. Kecukupan dan kemutahiran data/informasi dan metodologi : data/informasi serta bahan-bahan hukum kurang cukup mutakhir.
- d. Kelengkapan unsur dan kualitas penerbit : Jurnal sudah discontinued sejak 2020.

Human Rights and Legal Protection of Persons with Disabilities in Aviation Industry in Indonesia

Adya Paramita Prabandari¹, Elfia Farida¹, Rahayu¹

¹Lecturer at Diponegoro University, Indonesia

Abstract

Various matters relating to persons with disabilities are often overlooked and often lead to discrimination against them in various fields of life. Likewise, in Indonesia there is often discrimination against persons with disabilities in various aspects of life, including in aviation. For this reason, it is very important to analyze the protection of the rights of persons with disabilities in Indonesian aviation. The method used is a normative juridical method using a statute approach and conceptual approach to analyze secondary data obtained through library research. The government as a duty bearer is fully responsible for ensuring good and accessible service quality and providing facilities for persons with disabilities in flight. Likewise, airport and airline operators as air transport service providers should have SOPs of services that are in accordance with Government policy in order to provide maximum and equal services for persons with disabilities, as a form of protection for the rights possessed by persons with disabilities.

Keywords: *Protection, rights of disabilities, aviation, Indonesia.*

Introduction

Globalization is a very rapid and fundamental change in the structure of human life that has occurred since the beginning of the 21st century, and brings enormous changes in various fields, including the field of transportation. The development of transportation technology is very rapid, where the current movement of people, capital, and goods, both between countries and between regions in various parts of the world takes place more quickly with the support of aircraft transportation modes. Modes of aircraft transportation are not only used by people with normal conditions, but are also carried out by people who have different abilities and conditions from normal and reasonable of people with disabilities. In Indonesia, problems relating to persons with disabilities are often ignored and often lead to discrimination against them in various fields of life.

Likewise in civil aviation, where there are several times discrimination against persons with disabilities carried out by airlines, even the case reaches the legal domain¹.

In aviation industry, there are some incidences discriminating persons with disabilities in flight, although WHO has stated that disability is a human condition, and is not a type/form of disease². In addition, another form of discrimination carried out by airlines against persons with disabilities is the obligation to bring a companion for persons with visual impairments and other persons with disabilities, due to the notion that aircraft are not directly accessible for people with mobility disabilities³. Persons with disabilities, as members of the community and Indonesian citizens, truly have the same position, rights and obligations as other Indonesian citizens, although it cannot be denied that persons with disabilities have physical and/or mental disorders that can interfere or constitute obstacles to carrying out activities like people without disabilities. This paper explores the protection of persons with disabilities in Indonesian aviation by using human rights perspective.

Research Method

The research method used in this paper is a normative juridical method⁴, using a statute approach and

Psychometric Validation of the Maslach Burnout Inventory (MBI) Adapted to Moroccan Teachers

Abdeslam Amri¹, Zakaria Abidli², Mounir Bouzaaboul¹,
Ziri Rabea¹, Ahmed Omar Touhami Ahami¹, Abdelmajid Soulaymani²

¹Laboratory of Cognitive Behavioral Neuroscience and Applied Nutrition, Faculty of Science. Faculty of Sciences, Ibn Tofail University, Kenitra, Morocco, ²Laboratory of Genetics and Biometrics, Faculty of Sciences, Ibn Tofail University, Kenitra, Morocco

Abstract

Introduction: The literature on burnout research shows that more than 90% have used the Maslach Burnout Inventory (MBI).

Objective: The aim is to establish the psychometric properties in terms of reliability, sensitivity and validity of the Maslach Burnout Inventory (MBI) and to adapt it to the context of Moroccan teachers.

Method: This work was carried out through a process of translation and reverse translation of the original instrument by adapting the elements to the teaching profession. To determine the psychometric characteristics, we used Cronbach's alpha to determine reliability, exploratory factor analysis to extract factors and determine dimensionality, and confirmatory factor analysis to test the validity of the statistical model. Validation of the instrument was carried out on a sample of 170 teachers working in public schools in Ouezzane region (Morocco).

Results: Items 4, 5, 7, 9, 12, and 22 were relatively incoherent with respect to the other items, they were eliminated. The factorial analysis made appear three factors whose are explain 58.22% of the total variance. Cronbach's α for the whole questionnaire (0.761), for emotional exhaustion (0.819), depersonalization (0.850) and sense of personal accomplishment (0.785). The confirmatory factor analysis (CFA) showed satisfactory adjustment indices ($X^2 = 164,938$ - $df = 101$ - $CFI = .937$ - $TLI = .915$ - $RMSEA = .037$ - P close = .984).

Conclusion: We propose to use Maslach's Theoretical Model for the Moroccan Sample in Future Research on the burnout of Moroccan teachers.

Keywords: Psychometric, Validation, Maslach Burnout Inventory, Moroccan, Teachers.

Introduction

Burnout is a chronic response to emotional and interpersonal stressors in work that is exhausting,

cynical and ineffective¹. It manifests itself in three forms: emotional exhaustion, depersonalization and the loss of the sense of personal accomplishment². These three components are represented in the Maslach Burnout Inventory (MBI), whose success of his versions increases³. However, psychometric comparisons of MBI note both similarities and differences between several cultures⁴⁻⁵ and cross-cultural comparisons of teacher burnout have yielded mixed results. For this reason, it is interesting to produce a diagnostic tool for professional burnout that is valid and specific to the cultural context of teachers in order to manage the risk that threatens the

COVID 19: Evaluate of Liver and Renal Function Tests in Iraqi Patients

Abdullah Ali Mohammed¹, **Mahmood Nazar Mustafa**², Sura A. Abdulsattar³, Ahmed Salam Al-zaidi⁴

¹Assistant Lecturer (M.Sc.) Department of Chemistry and Biochemistry, ²Assistant Lecturer (M.Sc.) Department of Pathology and Forensic Medicine, University of Fallujah, College of Medicine, **Iraq**, ³Prof. Dr. (PHD) Department of Chemistry and Biochemistry, Mustansiriyah University, College of Medicine, Iraq, ⁴(M.Sc.) Department of Medical Analysis, Al-Furat General Hospital, Iraq

Abstract

The clinical features of COVID-19 are varied, ranging from asymptomatic state to acute respiratory distress syndrome and multi organ dysfunction. We aim to evaluate renal and liver functions of patients with COVID 19. Laboratory results were obtained from 107 patients with laboratory-confirmed COVID-19 who were admitted to the only Al-Furat General Hospital in Baghdad, Iraq from March 3 to June 9, 2020 and followed up until recovery. Normal levels of renal functions were presented. Meanwhile elevated levels of alanine aminotransferase (ALT) was observed in 10% and of aspartate aminotransferase (AST) was observed in 40% of patients with COVID 19, yet on comparison of the results at entering with at recovery it was observed significant differences ($p < 0.01$) of all patients. From these findings we conclude that the virus might be responsible for systemic inflammation.

Keyword: COVID 19; liver enzyme; urea; creatinine; AST, ALT.

Introduction

On 7 January 2020, a novel coronavirus was identified in the throat swab sample of one patient by the Chinese Center for Disease Control and Prevention (CDC), and was subsequently named as 2019nCoV by World Health Organization (WHO)^{1,2}. The virus was identified as a coronavirus that had >95% homology with the bat coronavirus and > 70% similarity with the SARS- CoV. Environmental samples from the Huanan sea food market also tested positive, signifying that the virus originated from there³. The number of cases started increasing exponentially, some of which did not have exposure to the live animal market, suggestive of the fact that human-to-human transmission was

occurring (2020)⁴. All ages are susceptible. Infection is transmitted through large droplets generated during coughing and sneezing by symptomatic patients but can also occur from asymptomatic people and before onset of symptoms⁵. The clinical features of COVID-19 are varied, ranging from asymptomatic state to acute respiratory distress syndrome and multi organ dysfunction. The common clinical features include fever (not in all), cough, sore throat, headache, fatigue, headache, myalgia and breathlessness⁶. Some patients with COVID-19 pneumonia also present with kidney injury, and autopsy findings of patients who died from the illness sometimes show renal damage. However, little is known about the clinical characteristics of kidney-related complications, including hematuria, proteinuria, and AKI⁷. Recently, there has been some insight into the impact of COVID-19 on other organs, as a number of reports have indicated that more than half of patients with COVID-19 showed varying levels of liver disease⁸. The median time from onset of symptoms to dyspnea was five day, hospitalization seven day and acute respiratory distress syndrome (ARDS) eight day. The need for intensive care admission was in 25–30%
