Catatan Penilaian artikel oleh Reviewer :

1. Kelengkapan unsur isi jurnal:

Pendahuluan cukup baik dan menggambarkan pentingnya penelitian. Artikel telah ditulis sesuai dengan International Journal of Progressive Sciences and Technologies (IJPSAT)

2. Ruang lingkup dan kedalaman pembahasan:

Ruang lingkup bahasan sudah luas, hasil dan pembahasan sudah didiskusikan. Diskusi telah melibatkan hasil penelitian dari peneliti lain. Diskusi masih sederhana, yang seharusnya lebih bisa dikembangkan.

3. Kecukupan dan kemutakhiran data/informasi dan metodologi:

Referensi sudah mutakhir. Metoda dapat dipahami oleh mereka yang ahli dibidang ini dan bisa direfleksikan. Diskusi telah melibatkan hasil penelitian dari peneliti lain.

4. Kelengkapan unsur dan kualitas terbitan:

Penerbitan sudah baik, sesuai dengan International Journal of Progressive Sciences and Technologies (IJPSAT)

The Importance Of Sociolinguistics To Language Learning And Teaching

Dang Thi Minh Thanh¹, Nguyen Thi Thanh Van²

¹ Foreign Language Department, University of Finance & Marketing (UFM), Ho Chi Minh city, Vietnam.

² Faculty of Foreign Languages, Dong Nai Technology University, Dong Nai, Vietnam.

Abstract – Sociolinguistics affects all areas of society, including cultural concepts, expectations and contexts, through the use of language; and the effects of language use on society. This paper aims to point out how three basic concepts in this field, namely imagined communities, English as an international language, language policy and planning can help ESL teachers to better understand and improve teaching for Vietnamese high school students.

Keywords – Imagined Communities, English As An International Language, Language Policy And Planning.

I. INTRODUCTION

In Vietnam, English has been taught at high schools for long time and witnessed continuous changes. To adapt global trend, The Ministry of Education has set a new goal for the curriculum: using English as a communication tool (MOET, 2006), leading to the shift from grammar – translation to communicative language teaching method (CLT) since 2006. However, applying these innovations into practice faces many obstacles. One of the biggest concerns of Vietnamese teachers is the poor participation of students in listening and speaking sections at schools. Another issue is the standard for teaching and learning English: whether to achieve the proficiency as native speaker or not. The concept of “Imagined reveals the gap between students and their expected community, leading to the low level of engagement in classroom. Besides, the studies about “language policy and planning” support teachers to find solutions for this circumstance, through the role of teachers in policy implementation. One the one hand, teachers can have some interventions to bring students closer to the objectives of the curriculum. On the other hand, the teachers can raise their voice to make the national curriculum better. Last but not least, “English as an international language” addresses the second concern, giving space for other standards, rather than being proficient as native speakers.

II. DISCUSSION

Regarding the first concern about students’ poor participation in speaking and listening sections, this relates to the concept of “Imagined communities”. That notion is defined by Norton (2013, p.7) as “groups of people, not immediately tangible and accessible, with whom we connect through the power of the imagination”. In this teaching context, high school students are under pressure because they are going to take the entrance examination to university, which is conventionally believed by parents and Vietnamese society to be the best option for students’ future. Consequently, achieving good performance in assessments is the direct factor motivating them in learning process. However, the structure of assessments of high school English program, even the entrance examination to university is unbalanced, which mainly focus on reading, grammar and overlook listening and speaking. It leads to

Development Of A Computational Algorithm For Solving The Pv Diffusion Problem In The Conditions Of Using A Storey Development System

Abstract – The development of a computational algorithm to solve the problem of PV diffusion in the context of the use of a layer development system is described in the article. A mathematical model of the management of the underground mixing process in the conditions of a layered system of development has been developed; the dynamics of the reagent concentration and pressure value at different values of the parameters affecting the technological process of underground mixing in the conditions of the layered system of development were studied; a computer model was developed to conduct numerical experiments and visualize the results in two- and three-dimensional graphics; a software package of the underground mixing process was developed to support technological decision-making in the management of the development of mineral deposits in the conditions of a stratified system of development. The developed computational algorithms and computer model can be used in decision-making, analysis and forecasting of parameters of the underground mixing process in order to optimally obtain minerals from real deposits developed in the stratified system of underground mixing.

Keywords – Underground mixing, layered system of development, specific gravity of reagent, hydrodynamics, concentration, computer model, numerical-approximate method, flow drive, variable directional method, control parameters, decision support, control scheme.
