Catatan penilaian artikel oleh reviewer:**1. Kesesuaian dan kelengkapan unsur isi jurnal:**

Artikel jurnal ini memiliki unsur-unsur yang lengkap, yaitu Title, Abstract, Introduction, Methods, Results, Discussions, Conclusion, dan References. Title disajikan dengan singkat dan jelas, Abstract juga dipaparkan secara lugas. Methods disajikan secara sistematis dengan mencakup karakteristik partisipan, desain penelitian, dan prosedur intervensi, serta instrument psikologis yang digunakan untuk mengukur variabel dependen. Results memuat hasil penelitian dengan menyajikan tabel yang memudahkan pembaca memahaminya, dan Discussions memberikan paparan mengenai teori dan hasil penelitian sebelumnya yang mendukung hasil penelitian ini. Conclusion memberikan ringkasan akan hasil penelitian yang diperoleh, dan References menyajikan daftar pustaka yang digunakan dalam artikel ini.

2. Ruang lingkup dan kedalaman pembahasan:

Penelitian ini menguji pengaruh senam Tera untuk mengurangi kecemasan pada lansia. Diskusi dilakukan dengan membahas karakteristik lansia, fenomena kecemasan pada lansia, dan aspek-aspek pada senam Tera yang berpotensi mengurangi kecemasan pada lansia. Hasil penelitian ini dibahas dengan teori yang relevan dan disandingkan pula dengan hasil penelitian sebelumnya yang telah dilakukan oleh para ahli.

3. Kecukupan dan kemutakhiran data/informasi dan metodologi:

Artikel jurnal ini didukung dengan 26 referensi yang 85% diantaranya merupakan terbitan 10 tahun terakhir. Hal ini memberikan justifikasi bahwa informasi yang disajikan dalam artikel tergolong mutakhir. Penelitian ini melibatkan 40 partisipan yang seluruhnya merupakan lansia. Untuk sebuah penelitian eksperimental, jumlah ini dirasa cukup, meskipun desain penelitiannya hanya melibatkan satu grup intervensi saja tanpa ada grup control sebagai banding.

4. Kelengkapan unsur dan kualitas penerbit:

Jurnal Keperawatan Jiwa ini diterbitkan oleh Faculty of Nursing, Universitas Airlangga, dengan ISSN 2656-3894 (print) dan 2656-4637 (elektronik). Unsur-unsur yang dimiliki jurnal ini termasuk lengkap. Kualitas cetak dan layout jurnal tergolong cukup baik.

5. Indikasi plagiasi:

Cek plagiasi dilakukan dengan uji Turnitin, yang menghasilkan Turnitin similarity indeks sebesar 10%. Hal ini memberikan gambaran bahwa di dalam artikel jurnal ini tidak adanya indikasi plagiasi dan tingkat orisinalitas artikel jurnal ini tergolong baik.

6. Kesesuaian bidang ilmu:

Kontribusi pengusul dalam penulisan artikel ini relevan dengan bidang keilmuan yang ditekuni pengusul, yaitu Psikologi.

Catatan penilaian artikel oleh reviewer:

1. Kesesuaian dan kelengkapan unsur isi jurnal:

Artikel jurnal ini memiliki bagian-bagian yang lengkap, meliputi Title, Abstract, Introduction, Methods, Results, Discussions, Conclusion, dan References. Title disajikan dengan singkat dan jelas, Abstract juga dipaparkan secara lugas. Methods disajikan secara sistematis dengan mencakup karakteristik partisipan, desain dan prosedur penelitian, dan instrumen psikologis yang digunakan untuk mengukur variabel dependen. Results memuat hasil penelitian, dan Discussions memberikan ulasan pembahasan mengenai hasil penelitian yang didukung dengan paparan mengenai teori dan hasil penelitian sebelumnya. Conclusion memberikan ringkasan akan hasil penelitian yang diperoleh, dan References menyajikan daftar pustaka yang digunakan dalam artikel ini.

2. Ruang lingkup dan kedalaman pembahasan:

Penelitian ini memiliki tujuan untuk menguji pengaruh senam Tera untuk mengurangi kecemasan pada lansia. Pendahuluan diawali dengan menyajikan karakteristik lansia, fenomena kecemasan pada lansia, dan aspek-aspek pada senam Tera yang berpotensi mengurangi kecemasan pada lansia. Hal ini kemudian diambil datanya, diuji, dan dianalisis, untuk kemudian dibahas dengan teori yang relevan dan disandingkan pula dengan hasil penelitian sebelumnya yang telah dilakukan oleh para ahli.

3. Kecukupan dan kemutakhiran data/informasi dan metodologi:

Artikel jurnal ini menggunakan referensi pendukung sejumlah 26 referensi, yang sebagian besar diantara referensi yang digunakan tersebut merupakan terbitan 10 tahun terakhir. Hal ini memberikan justifikasi bahwa informasi yang disajikan dalam artikel tergolong mutakhir. Penelitian ini melibatkan 40 partisipan yang seluruhnya merupakan lansia. Untuk sebuah penelitian eksperimental, jumlah ini dirasa cukup, meskipun desain penelitiannya hanya melibatkan satu grup intervensi saja tanpa ada grup control sebagai banding.

4. Kelengkapan unsur dan kualitas penerbit:

Artikel ini dipublikasikan dalam Psychiatry Nursing Journal atau Jurnal Keperawatan Jiwa yang diterbitkan oleh Faculty of Nursing, Universitas Airlangga, dengan ISSN 2656-3894 (print) dan 2656-4637 (elektronik). Unsur-unsur yang dimiliki jurnal ini tergolong lengkap. Kualitas cetak dan layout jurnal tergolong cukup memadai.

5. Indikasi plagiasi:

Cek plagiasi dilakukan dengan uji Turnitin, yang menghasilkan Turnitin similarity indeks sebesar 10%. Hasil uji Turnitin ini menunjukkan bahwa di dalam artikel jurnal ini tidak adanya indikasi plagiasi dan tingkat orisinalitas artikel jurnal ini tergolong baik.

6. Kesesuaian bidang ilmu:

Keterlibatan pengusul dalam artikel jurnal ini memberikan kontribusi yang relevan dengan bidang keilmuan yang ditekuni pengusul, yaitu Psikologi.

Introduction: Assertive behavior is the ability to communicate the individual's want, feel, and think to others honestly and openly while respecting personal and other people's rights. One way to increase assertiveness in adolescents is through assertive training activities where this activity presents systematic activities that can develop and train individuals' abilities to express their thoughts, feelings, desires, and needs confidently. The purpose of this study was to analyze the change in assertive behavior of adolescents living in Islamic boarding schools through assertive training.

Method: This was pre-experimental research with pre-post design. The sample was 80 respondents which were obtained by the purposive sampling technique. The measuring instrument uses assertive behavior questionnaires and data analysis using the Wilcoxon Paired test

Results: The results of the analysis of assertive behavior in adolescents before the intervention were in a low category (42.5%) and after the intervention, adolescent assertive behavior was in a good category (46.3%). The results showed a p-value of 0.00 which indicated that there was an increase in the assertive behavior of adolescents living in Islamic boarding schools through assertive training.

Conclusions: Adolescents with high assertiveness are able to control their emotions, mental health and have good coping with solving personal and social problems, and are able to express their wishes firmly to others

Introduction: The most common mental problem in the elderly is anxiety. The elderly is anxious due to lack of activity and rest. Elderly need activities that diverse, interesting, and easy to practice. Tera gymnastics therapy is type of exercise, easy to apply and does not require a lot of time. Tera gymnastics can be applied to the elderly as an interesting and easy alternative to exercise. The purpose of this study was to explain the effect of tera exercise on reducing anxiety in the elderly.

Method: This study uses pre-experimental design with one group pre-post-test model. The study population was 43 elderly people who were in Boladangko Village, Central Sulawesi. The sample was 40 respondents with purposive sampling technique. The inclusions are 1) the elderly do not experience physical limitations 2) aged more than 60 years. Data collection using Depression Anxiety Stress Scale (DASS). The data analyzed by Wilcoxon test.

Result: The results showed that most of the 37(92.5%) respondents stated that their anxiety was reduced. The results showed that 29(78.37%) respondents decreased 1 level of anxiety level, while the rest decreased 2 levels of anxiety level. The results of Wilcoxon test obtained $Pvalue=0.009$ indicating significant effect of giving tera exercise to the anxiety of the elderly.

Conclusion: There is an influence between tera gymnastics and elderly anxiety, indicating that tera gymnastics can be applied to elderly as alternative to increasing elderly activities. Future research is expected to increase duration and combined with other methods to support better training.

Background: COVID-19, a strain of the coronavirus that causes acute respiratory syndrome, first appeared in the Chinese city of Wuhan and quickly spread throughout the world in early 2020. The COVID-19 pandemic has changed health care systems around the world and affected the mental health of healthcare workers and their quality of life. Aim: to review the existing scientific evidence regarding mental health and quality of life of health workers during the COVID-19 pandemic.

Methods: This study was taken from the pubmed, ScienceDirect, and Ebsco databases identified between December 2019 to July 2021 and was limited to peer-reviewed research written in English, quantitative research on mental health and quality of life with a cross sectional approach. Articles that fit the criteria are then analyzed using the critical appraisal tool that is appropriate for results of the research.

Results: The results showed an increase in mental disorders, including stress, anxiety, depression, and PTSD in health workers. This is caused by several factors, namely 1) stressors that contribute to the work environment 2) work pressure components, 3) epidemic components, 4) family-related components. This condition can affect the quality of life of health workers.

Conclusion: Research evaluating the direct and indirect association of mental disorders on the mental health of healthcare professionals is urgently needed to improve treatment, mental health care planning and for preventive measures during a potential next pandemic.
