			20			
a. Kelengkapan unsur isi artikel (10%)			2			2
b. Ruang lingkup dan kedalaman pembahasan (30%)			6			6
c. Kecukupan dan kemutakhiran data/informasi dan metodologi (30%)			6			6
d. Kelengkapan unsur dan kualitas penerbit (30%)			6			6
Total (100%)			20			20
Nilai yang diperoleh $(40\% \times 20) / 3 = 2,67$						
Catatan Penilaian Artikel oleh Reviewer						
1. <u>Kesesuaian dan kelengkapan unsur isi jurnal:</u>						

Artikel ditulis sesuai dengan kaidah penulisan yang berlaku di Jurnal Ners, yakni judul, penulis dan afiliasinya, Abstract, Introduction, Materials & Methods, Results, Discussion, Conclusion, dan References.

2. **Ruang lingkup dan kedalaman pembahasan:**

Tulisan di artikel membahas mengenai model kualitas kehidupan kerja perawat untuk meningkatkan layanan kerja perawat, terutama di perawat di Rumah Sakit.

3. **Kecukupan dan kemutakhiran data/informasi dan metodologi:**

Data yang diperoleh cukup banyak, namun dapat dianalisis dengan baik menggunakan PLS dan uji t. Referensi yang digunakan cukup memadai dan mendukung pembahasan.

4. **Kelengkapan unsur dan kualitas terbitan:**

Jurnal ini tergolong Jurnal Nasional dengan peringkat 2 SINTA berdasarkan SK Dirjen Penguatan Riset dan Pengembangan Kemristekdikti RI No. 21/E/KPT/2018 tanggal 9 Juli 2018 dengan ISSN 2502-5791 (online); terindeks di *Google Scholar*, *Indonesian Publication Index (PII)*, *Indonesian Scientific Journal Database*, *Moraref*, *Directory of Open Access Journal (DOAJ)*, Asian Citation Index, EBSCO, dan World Cat.

Komponen yang Dinilai	Nilai Maksimal Jurnal Ilmiah					Nilai Yang Diperoleh
	Internasional Bereputasi	Internasional	Nasional Terakreditasi	Nasional Tidak Terakreditasi	Nasional Terindeks DOAJ	
			20			
a. Kelengkapan unsur isi artikel (10%)			2			2
b. Ruang lingkup dan kedalaman pembahasan (30%)			6			4
c. Kecukupan dan kemutakhiran data/informasi dan metodologi (30%)			6			4
d. Kelengkapan unsur dan kualitas penerbit (30%)			6			6
Total (100%)			20			16
Nilai yang diperoleh $(40\% \times 16)/3 = 2,13$						
Catatan Penilaian Artikel oleh Reviewer						
1. <u>Kesesuaian dan kelengkapan unsur isi jurnal:</u>						

Penulisan artikel meliputi judul, penulis dan afiliasi, abstrak, pengantar, materi dan metode, hasil, diskusi, kesimpulan, dan referensi. Kajian artikel tentang kualitas kehidupan kerja perawat memang relevan dengan bidang ilmu penulis yaitu psikologi klinis.

2. **Ruang lingkup dan kedalaman pembahasan:**

Tidak ada dustifikasi memilih variable burnout syndrome dan nursing service sebagai variable endogenous dan variable organizational culture nurse feactor, job characteristic, kualitas kerja perawat sebagai variable exogenous dengan dukungan jurnal yang relevan.

3. **Kecukupan dan kemutakhiran data/informasi dan metodologi:**

Tidak ada penjelasan prosedur pengambilan sampel dengan cluster random sampling dan tidak dijelaskan populasinya. Deskripsi data cukup rinci namun syarat terpenuhinya analisis SEM tidak dijelaskan.

4. **Kelengkapan unsur dan kualitas terbitan:**

Jurnal ini tergolong Jurnal Nasional dengan peringkat 2 SINTA berdasarkan SK Dirjen Penguatan Riset dan Pengembangan Kemristekdikti RI No. 21/E/KPT/2018 tanggal 9 Juli 2018 dengan ISSN 2502-5791 (online); terindeks di *Google Scholar*, *Indonesian Publication Index (PII)*, *Indonesian Scientific Journal Database*, *Moraref*, *Directory of Open Access Journal (DOAJ)*, Asian Citation Index, EBSCO, dan World Cat.

Improving nursing work services through development model of quality of nursing work life

TI Pujiyanto, S Suprihati... - Journal ..., 2017 - download.garuda.kemdikbud.go.id

Introduction: The performance of nurses in a hospital is influenced by the mental and emotional state of the nurse; the higher the workload, the greater the work stress of the nurse. It is a necessity to conduct research to explain a quality of nursing work life model based on the context of Indonesian nurses. Methods: The research process consisted of two stages: observational analytic and model trial. The first phase used cross-sectional design with cluster random sampling technique and obtained 102 samples. The second stage used ...

Publication Schedule

Jurnal Ners is published semi-annually (April and October).

Manuscript Submission

The manuscript should be written in Ms. Word format. Figure, illustration, and picture are included in manuscript file. Submit manuscript directly to <http://e-journal.unair.ac.id/index.php/JNERS>. Jurnal Ners will automatically reject any manuscript submitted via email or hardcopy.

Manuscript Publishing

The Editorial Board determines feasible manuscript after obtaining recommendations from peer reviewers. Manuscript revision is author responsibility, and manuscripts that are not feasible will be returned to the author.

ACKNOWLEDGEMENT TO REVIEWERS

Introduction: Breast cancer occupies the first position in Asia's women cancer cases in recent years. Signs and symptoms experienced by the patient affect the stress condition of the patient as well as the family as a caregiver. The condition changes to deal with problems during patient assistance as a major problem in an outpatient setting. The demands of adaptation to through the needs during the period of assistance by the family is more complex. The study aimed to determine the experience of stress and adaptation of breast cancer patient's family. Methods: The qualitative method used with in-depth interviews on seven respondents who were the family caregiver of breast cancer patients. Setting carried out at the shelter house in Bandung. The analysis process used thematic analysis based on Braun & Clarke. Results: The results found five main themes are: 1) Stressor on breast cancer patients, 2) Crisis fulfillment of companion needs, 3) Crisis accompaniment, 4) Coping mechanisms of caregiver, and 5) Ability in adaptation. Conclusion: Family experience in assisting breast cancer patients who undergo outpatient also impact families tension who traversed with a subjective effort optimally to adapt in accompanying patients and the needs of other resource support system. Suggestions for future step are early recognition of stress by health workers especially nurses to be able to provide targeted interventions to develop positive adaptation to clients. The development through research is needed in applying family center care both the outpatient and inpatient care in an integrated manner.

Introduction: Critical patients are patients who potentially get reversible dysfunction in one or more life-threatening organs and require care in the Intensive Care Unit (ICU). Methods: The objective of this research is to analyse the physical function-tardive dyskinesia in critical patients with sedation in the ICU. The design of this research is cross-sectional. The population is all of the critical patients in the ICU of the Baptist Hospital in Kediri. The purposive sample population was 41 respondents based on the inclusion and exclusion criteria. The variables are ‘giving the sedation’ and ‘physical function-tardive dyskinesia’. The data was collected using a Motor Activity Assessment, and the Sedation Scale for Critically Ill Patients and Tardive Dyskinesia Screening. Results: The results showed that giving sedation can slow physical function in the form of motor activity; the response of noxious stimuli (7.3%), response to touch or calling name (19.5%) and an increasing score of agitation and co-operative (4.9%). Symptoms of tardive dyskinesia increased after sedation in the form of tongue protrusion (4.9%), lip-smacking, puckering and pursing (2.4%), and rapid movements of the arms and legs. The administration of sedation in the first 24-hours in ICU patients affects the physical function of the critical patients (p = 0.005). Conclusion: Giving sedation affects the patients’ physical functions. Therefore, the prevention of the effects of sedation and treatment during ICU is needed in order to avoid a decrease in the physical function of critical patients.					

Competence of the Civil Service Police Unit (CSPU) in providing Emergency First Aid Assistance

Introduction: In the year 2014 there were 456 disasters in Indonesia, comprising 227 natural disasters, 197 non-natural disasters and 32 social disasters. The community is expected to be well prepared in accordance with their respective capacities, and this includes the Civil Service Police Unit (CSPU), which must be competent in providing emergency first aid. The aim of this study is to analyse the effect of emergency first aid training on the competence of CSPU in providing emergency first aid assistance in the Surakarta region.

Methods: This study used a pre-experimental technique using a pre-post test group design. The sample consisted of 107 respondents who were recruited by total sampling. Variables in this study were competencies in handling emergency first aid assistance including knowledge, attitude and practice. Data were collected by questionnaire and analysed using Wilcoxon signed-rank test with a p-value of 0.05.

Results: There were significant differences in scores on knowledge, attitudes, and practice in providing emergency first aid assistance, with a p-value of 0.012 for knowledge, 0.000 for attitude and 0.001 for practice, respectively.

Conclusion: Emergency first aid training is urgently needed for CSPU members that are ever directly in charge in the community in any situation. The CSPU must have the first aid competence to support its performance.
