Review Comments: In this paper have been done to investigate the characteristics of the fishing boat using PVC pipe material with variations of hullform that have the smallest total ship resistance, and good ship stability that meets International Maritime Organisation (IMO) standards. The method used in this study is to creating 3D modeling with variations of hullform and the fishing gear type. The stability of the ship in flat model no.2 with different types of fishing gear meets the IMO standard, but the smallest GZ value is obtained when using longline fishing gear. Analytical study.
