Abstract

[View references \(18\)](#)

Peatland in Indonesia is widely used for developing agriculture. Cultivate peatlands include marginal land into the productive agricultural land is not easy. Need special treatment to change the peatland into productive land for planting. Some transmigrants who are not able to survive to cultivate peat chose to leave their land and go back to the area where they originated. Some of them still survive to cultivate peatland until they are successful to convert it into a productive farmland. Basarang Jaya Village is one of the first general transmigration areas that opened in 1961 in the Province of Central Kalimantan. This village is one of the transmigration villages which succeeded in cultivating peat land into agricultural land and productive plantation. In 2010, the Directorate General of Aquaculture decided to develop Basarang Jaya Village as minapolitan cultivation pilot area in Central Kalimantan Province. This study aims to find a survival strategy transmigrants Basarang Jaya Village in the face of environmental conditions have peat. Data were collected using seven farmers who constituted the first wave of transmigrants who come to the Basarang Jaya Village with semi-structured interviews and analyzed qualitatively. The results showed that the survival strategies of transmigrants in Basarang Jaya Village are high fighting spirit and motivation and social adaptation to the local culture by studying and adopting the way of life of the local community that DayakNgaju tribe. © IAEME Publication.
