Indonesian Regulations Related to State Losses in Persero State-Owned Enterprises Partly Owned by the State

Henny Juliani¹, Kadek Cahya Susila Wibawa², Solechan³, Sonhaji⁴

^{1,2,3,4}Faculty of Law, Universitas Diponegoro

ABSTRACT: Indonesian Regulations Related to State Losses in Persero State-Owned Enterprises Partly Owned by the State. Persero SOE as a form of SOE has capital in the form of share ownership which is wholly or at least 51% (fifty-one percent) of its shares owned by the Republic of Indonesia. The main objective is to pursue profit. Thus, it is possible that in an SOE Persero, the shares are not only owned by the state but also partially owned by other parties. Therefore, the capital of the SOE is partly or wholly derived from state finances. The type of research used was qualitative research, especially doctrinal legal research. It used a statute approach, collecting data and legal materials through library research and analyzing using qualitative analysis. The research results obtained were state assets that have been transformed into SOE capital whose management was subject to the business paradigm (business judgment rules). However, the separation of state assets does not turn them into SOEs assets which are independent of state assets. Therefore, the operationalization of SOEs is based on both private law and public law.

KEYWORDS: Regulation; state loss; State Owned Enterprises; share.

A. INTRODUCTION

Indonesia is a constitutional state with the concept of a welfare state. It means that a welfare state or *welvarestaat* concept or commonly known as a material rule of law state (Thamrin, 2013). Kadek Wibawa stated that this is in line with the objectives of the state as stated in the Preamble to the 1945 Constitution of the Republic of Indonesia (1945 Constitution of the Republic of Indonesia) paragraph IV, which is further formulated: "government of Indonesia protects all the people of Indonesia and all the independence and the land that has been struggled for, and to improve public welfare, to educate the life of the nation and to participate toward the establishment of a world order based on freedom, perpetual peace, and social justice" (Susila Wibawa, 2019). This national goal is implemented through the administration of the state by the government as the bearer of people's sovereignty in the form of implementing general administration and development activities in all aspects of national life.

Indonesia as the state according to the law, the state financial management system must also be based on the main rules stipulated in the 1945 Constitution of the Republic of Indonesia Chapter VIII regarding Financial Matters. In Article 23 paragraph (1), it is stated "The state revenue and expenditure budget as a form of state financial management is determined annually by law and implemented openly and responsibly for the greatest prosperity of the people." Furthermore, Article 23C of the 1945 Constitution of the Republic of Indonesia states, "Other matters regarding state finances are regulated by law."

Article 23 C of the 1945 Constitution of the Republic of Indonesia was then implemented with 3 (three) packages of laws, namely Law Number 17 of 2003 concerning State Finance (State Finance Law), Law Number 1 of 2004 concerning the State Treasury (State Treasury Law), and Law Number 15 of 2004 concerning Examination of State Financial Management and Responsibility. Article 6 paragraph (1) of the Law on State Finance states that: "The President as the head of government holds the power to manage state finances as part of government power." This power includes general authority and special authority. Due to the widening and complexity of state financial management activities, the State Finance Law also regulates financial relations between the government and state companies, regional companies, private companies, and public fund management bodies.

Based on Article 24 paragraphs (1) and (2) of the State Finance Law and Article 1 point 1 of the State Treasury Law, State-Owned Enterprises (hereinafter referred to as SOEs) are also included in the scope of state finance and treasury. Article 3 paragraph (1) of the Law on State Financial Management and Accountability Examination confirms that the audit of state financial management and responsibility carried out by BPK covers all elements of state finance as referred to in Article 2 of the State Finance Law. Therefore, based on these provisions, BPK has the authority to conduct audits of SOEs.

Life Scenario System of Care for Stroke Survivors and Families: An Ethnography Study

Kartika Setia Purdani¹, Somporn Rungreangkulkij²

¹Faculty of Nursing, Universitas Muhammadiyah Kalimantan Timur, Indonesia

²Faculty of Nursing, Khon Kaen University, Thailand

ABSTRACT: The Greek word “Apoplexies” or “Apoplexy” for violent who is 40-60 years old and being struck was called by Hippocrates in 460-370 BC to mention stroke today. The tardiness for 10-minute delays will increase the disability impact. The most significant effect, in this case, is stroke patients and their families. The aim of this study is to explore and describes the life scenario of stroke survivors and families in the community. Ethnography study is an approach for qualitative research in this study with details the main participants are seventeen stroke survivors and twenty-four stroke caregivers. The data collection method is observation, in-depth interviews, and continued field notes for the content analysis, the duration for collecting data is five months. The result of this study is two categories, life scenarios of stroke survivors and life scenarios of family. The life scenarios of stroke survivors support two scenarios, and the life scenario of families as stroke caregivers has three scenarios. Stroke is not a misfortune disease or a punishment from God. This disease is having a golden period for acute care and rehabilitation training times, when the stroke survivors and families optimize this time, the loss of body function is controlled. On the other hand, the main caregiver has several responsibilities in this condition. Further, both of them needed support to continue and adapt their lives to new roles.

KEYWORDS: caregiver, ethnography study, stroke, system of care

I. INTRODUCTION

Indonesia is the highest stroke population in South Asia (Venketasubramanian, Yoon, Pandian 2017). Someone who had a stroke attack and still survive can call a stroke survivor. They still live but have some effect, in relation to weakness or limited body function. Because of that, they need support from their family to avoid stroke return attacks and keep themselves alive. The role of family members who undertake patient care is unarguably important for stroke rehabilitation. Caregivers play a key role in facilitating recovery (Sari, Mubasyiroh, and Supardi 2017). The impact on stroke survivors after an attack includes psychological and physical impairment. The different circumstances on largely stroke survivors confused and frustrated. Not stop depending on activity, but also, they must bear the psychological burden (Torregosa et al. 2018). Three of characteristics stroke survivors are related to body function, coping, and the last is the quality of life (Gorski 2013; Fang and Tao et al. 2017; Torregosa et al. 2018). The stroke incident would be negative consequences for the individual as a stroke survivor, related to this condition, almost stroke survivor dependence on others. The need for care having related to the position, function, and structure of families. Because of the unique culture in the family, those with similar conditions maybe have different maintaining states of health (Kaakinen R. Joanna 2010).

Family or informal caregiving is a stressful, life-consuming activity that often impacts the social, emotional, and financial health of the caregiver. The caregiver burden has been described as a negative reaction to the impact of providing care on caregivers' social, occupational, and personal roles. Studies of family caregivers suggest that stress and burden can affect their physical and mental health. Negative health outcomes such as depression and overall poor health including a lowered immune system and higher blood pressure have been reported. Family caregivers may also experience burnout, which can cause early nursing home placement for the care recipient. Most alarming, family caregivers experience an increased mortality rate and are at a greater risk of abusing the care recipient as a consequence of stress and burden (Eifert et al. 2015).

Related to cardiovascular disease which is one of the NCDs, in Indonesia, we have acts and policies to support health, such as Act No. 36 of 2009 for equality health service, in the MoH National Strategic Plan for Universal Health Coverage for Indonesian peoples, and six Indonesian health systems. Furthermore, the government was to support verification of the Indonesian health system,
