

Certificate

This to certify that

Churun A'in

Has contributed as

Presenter

in The 3rd International Conference on Tropical
and Coastal Region Eco-Development (ICTRED) 2017

Yogyakarta, 2nd - 4th October, 2017

Director of Research and Community Service Institute
Diponegoro University,

Prof. Dr. rer.nat. Heru Susanto, S.T., M.M., M.T.

Chair,

Dr. Agus Triyanto

CMSESJ

3rd International Conference on Tropical and Coastal Region Eco Development (ICTCRED 2017)

IOP Conference Series: Earth and Environmental Science
Volume 116

Yogyakarta, Indonesia
2 - 4 October 2017

Volume 116

3rd International Conference on Tropical and Coastal Region Eco Development 2017

2–4 October 2017, Yogyakarta, Indonesia

Accepted papers received: 31 January 2018

Published online: 8 March 2018

Preface

[3rd International Conference on Tropical and Coastal Region Eco Development 2017](#)

[Note from Editors](#)

[Peer review statement](#)

Papers

[Social Cognitive Predictors of Interest in Research Among Life Sciences Academics](#)

Dian R. Sawitri, Harlina Nurtjahjanti and Anggun R. Prasetyo.....1

[Library Development Strategy for The Community at Coastal Areas](#)

Putut Suharso, Bani Sudardi, Sahid Teguh Widodo and Sri Kusumo Habsari.....5

[The Effects of Treatments on Batu Banana Flour and Percentage of Wheat Substitution on The Resistant Starch, In Vitro Starch Digestibility Content and Palatability of Cookies Made with Banana \(*Musa balbisiana* Colla\) Flour](#)

D Ratnasari, N Rustanti, F Arifan and DN Afifah.....11

[Stock Analysis of *Metapenaeus affinis* \(H.Milne Edwards, 1837\) on the North Coast of Central Java, Indonesia](#)

Suradi Wijaya Saputra, Anhar Solichin and Wiwiet Teguh Taufani.....19

[Potential of L-fucose isolated from Brown Seaweeds as Promising Natural Emulsifier compare to Carboxymethyl Cellulose \(CMC\)](#)

A N Al-Baarri, A M Legowo, Widayat, S B M Abduh, F P Lestari, D Desnasari and I P M Santoso.....27

[Copigmentation Of Anthocyanin Extract of Purple Sweet Potatoes \(*Ipomea Batatas* L.\) Using Ferulic Acid And Tannic Acid](#)

I Susanti, H Wijaya, F Hasanah and S Heryani.....33

[Growth Performance of Catfish \(*Clarias Gariepinus* Burchell, 1822\) Cultured in High Density on the Biofloc System](#)

Fajar Basuki, Tristiana Yuniarti, Dicky Harwanto and Titik Susilowati.....39

[Sex Diversity Approach of Spiny Lobster \(*Panulirus* spp\) to Marine Oil Spill Pollution in Southern Waters of Java](#)

F E D Haryono, Ambariyanto and I Sulisty.....46

[Effect of The Phytase Enzyme Addition in The Artificial Feed on Digestibility of Feed, Feed Conversion Ratio and Growth of Gift Tilapia Saline Fish \(*Oreochromis niloticus*\) Nursery Stadia I](#)

Diana Rachmawati, Istiyanto Samidjan and Tita Elfitasari.....55

[Engineering Technology Of Fish Farming Floating Nets Cages On Polka Dot Grouper \(*Cromileptes Altivelis*\) Used Artificial Feed Enriched Phytase Enzyme](#)

Istiyanto Samidjan and Diana Rachmawati.....67

[The Diversity of *Vibrios* Associated with Vibriosis in Pacific White Shrimp \(*Litopenaeus vannamei*\) from Extensive Shrimp Pond in Kendal District, Indonesia](#)

Sarjito, Alfabetian Harjuno Condro Haditomo, Desrina, Ali Djunaedi and Slamet Budi Prayitno.....80

[Factors Affecting Husband Participation in Antenatal Care Attendance and Delivery](#)

R Rumaseuw, S M Berliana, N Nursalam, F Efendi, R Pradanie, P D Rachmawati and G E Aurizki.....87

[Nitrate and Phosphate Contents on Sediments Related to The Density Levels of Mangrove *Rhizophora* Sp. in Mangrove Park Waters of Pekalongan, Central Java](#)

E Supriyantini, A Santoso and N Soenardjo.....95

[Analysis of the Survival of Children Under Five in Indonesia and Associated Factors](#)

Annisa Nur Islami Warrohmah, Sarni Maniar Berliana, Nursalam Nursalam, Ferry Efendi, Joni Haryanto, Eka Misbahatul M Has, Elida Ulfiana and Sylvia Dwi Wahyuni.....105

[Formulation of Emergency Food in Biscuit-Form Made From Proso Millet Flour \(*Panicum miliaceum*\) and Snakehead Fish \(*Channa striata*\) –Tempeh Flour Koya](#)

R B K Anandito, S R Kurniawan, E Nurhartadi and Siswanti.....111

[The Relation of Environmental Quality and Fishery Sector in Indonesia](#)

Shanty Oktavilia, Reikha Habibah Yusfi, Firmansyah and FX Sugiyanto.....119

[Oceanographic Factors in Fishing Ground Location of Anchovy at Teluk Cenderawasih National Park, West Papua : Are These Factors Have an Effect of Whale Sharks Appearance Frequencies?](#)

Evi Nurul Ihsan, Siti Yasmina Enita, Kunarso and Anindya Wirasatriya.....124

[Probiotic Candidates from Fish Pond Water in Central Java Indonesia](#)

Alfabetian Harjuno Condro Haditomo, Desrina, Sarjito and S. Budi Prayitno.....133

[Flavor Enhancer From Catfish \(*Clarias batrachus*\) Bekasam Powder and Angiotensin-I-Converting Enzyme \(ACE\) Inhibitory Activity in Various Dishes](#)

Yanesti N Lestari, Retno Murwani and Tri W Agustini.....139

[The Use of Different Diets for Feeding Rate and Growth of Shortfin Eel \(*Anguilla bicolor bicolor*\)](#)

N Taufiq-Spj, S Sunaryo, A Wirasatria, I Pratikto, D H Ismunarti and M I Syaputra.....150

[Impact of Monsoon to Aquatic Productivity and Fish Landing at Pesawaran Regency Waters](#)

Kunarso, Muhammad Zainuri, Raden Ario, Bayu Munandar and Harmon Prayogi.....158

[Business Profile of Boat Lift Net and Stationary Lift Net Fishing Gear in Morodemak Waters Central Java](#)

Trisnani D Hapsari, Bogi B Jayanto, Aristi D P Fitri and I Triarso.....168

[Impact of Fishery Policy on Fishery Manufacture Output, Economy and Welfare in Indonesia](#)

Firmansyah, Shanty Oktavilia, F.X. Sugiyanto and Ibnu N Hamzah.....177

[Cytotoxicity and Phytochemical Profiling of *Sargassum Sp.* Extract As Anti-Mdr Bacteria](#)

Wilis A. Setyati, Rini Pramesti, Muhamad Zainuddin, Maya Puspita and Person P Renta.....183

[Mapping of HABs Contaminated In Green Shells \(*Perna viridis*\) in Semarang Bay](#)

Churun A'in, Suryanti Suryanti and Haeruddin Haeruddin.....191

[Nutritional Composition Changes During *Tempeh Gembus* Processing](#)

Ruth Nazareth Sandessy Damanik, Dwi Yanti Winda Pratiwi, Nurmasari Widyastuti, Ninik Rustanti, Gemala Anjani and Diana Nur Afifah.....200

[Characterizations of milkfish \(*Chanos chanos*\) meatballs as effect of nanoencapsulation liquid smoke addition](#)

Fronthea Swastawati, Ambaryanto, Bambang Cahyono, Ima Wijayanti and Diana Chilmawati.....210

[Clinical Outcome And Arginine Serum of Acute Ischemic Stroke Patients Supplemented by Snakehead Fish Extract](#)

Dwi Pudjonarko, Retnaningsih and Zainal Abidin.....217

[Implementation of Water Safety Plans \(WSPs\): A Case Study in the Coastal Area in Semarang City, Indonesia](#)

Budiyono, P Ginandjar, L D Saraswati, D R Pangestuti, Martini and S P Jati.....224

[Effect of Different Coating Materials on The Characteristics Of Chlorophyll Microcapsules from *Caulerpa racemosa*](#)

R A Kurniasih, E N Dewi and L Purnamayati.....237

[Effect of Melanin Free Ink Extracted From Squid \(*Loligo* sp.\) on Proximate and Sensory Characteristics of Soft-Bone Milkfish \(*Chanos chanos*\) During Storage](#)

Tri Winarni Agustini, Hadiyanto, Ima Wijayanti, Ulfah Amalia and Soottawat Benjakul.....247

[Nutrition Quality and Microbiology of Goat Milk Kefir Fortified with Vitamin B₁₂ and Vitamin D₃ during Storage](#)

EP Dianti, G Anjani, DN Afifah, N Rustanti and B Panunggal.....255

[Total Lactic Acid Bacteria \(LAB\), Antioxidant Activity, and Acceptance of Synbiotic Yoghurt with Binahong Leaf Extract \(*Anredera cordifolia* \(Ten.\) Steenis\)](#)

R P Lestari, C Nissa, D N Afifah, G Anjani and N Rustanti.....261

[The Effectiveness of Heterotrophic Bacteria Isolated from Dumai Marine Waters of Riau, Used as Antibacterial against Pathogens in Fish Culture](#)

F Feliatra, Nursyirwani, A Tanjung, DS Adithiya, M Susanna and I Lukystyowati.....267

[Preliminary Study On Gonad Maturity Stages of the Sea Cucumber *Paracaudina australis* from Kenjeran Water, Surabaya, Indonesia](#)

Widianingsih Widianingsih, Muhammad Zaenuri, Sutrisno Anggoro, Hermin Pancasakti Kusumaningrum and Retno Hartati.....279

[EXPLORING THE POSITION OF OLD SEMARANG SEA PORT: Based on Javanese City Pattern](#)

R. Siti Rukayah, Endang Sri Susilo, Muhammad Abdullah and Siddhi Saputro.....287

[Total lactic acid bacteria, antioxidant activity, and acceptance of synbiotic yoghurt with red ginger extract \(*Zingiberofficinale var. rubrum*\)](#)

B A Larasati, B Panunggal, D N Afifah, G Anjani and N Rustanti.....295

[Edco-tourism; A Coastal Management Program to Improve Social Economics](#)

Arsi Rakhmanissazly, Anggun Intan Permatasari and Ely Chandra Peranginangin.....303

[Exploration of Sea Cucumbers *Stichopus hermanii* from Karimunjawa Islands as Production of Marine Biological Resources](#)

Delianis Pringgenies, Siti Rudiyaniti and Ervia Yudiati.....313

[Microbiological Characteristic and Nutrition Quality of Goat Milk Kefir Based on Vitamin D₃ Fortification Time](#)

F Fauziyyah, B Panunggal, D N Afifah, N Rustanti and G Anjani.....321

[Effect of Protein-Based Edible Coating from Red Snapper \(*Lutjanus* sp.\) Surimi on Cooked Shrimp](#)

I Rostini, B Ibrahim and W Trilaksani.....330

[The Environmentally Sound Aquaculture Strategies Based on Bioaccumulation of Heavy Metal of Lead \(Pb\) on Seaweed of *Gracilaria verrucosa* on Aquaculture Areas of Muarareja Village, Tegal City](#)

Nurjanah, Ambariyanto, Supriharyono and Bambang Yulianto.....358

[Determination Hypoiodous Acid \(HIO\) By Peroxidase System Using Peroxidase Enzyme](#)

A N Al-Baarri, A M Legowo, Widayat, S B M Abduh, M Hadipernata, Wisnubroto, D K Ardianti, M N Susanto, M Yusuf and E K Demasta.....347

[Antimicrobial activity of *tempeh gembus* hydrolyzate](#)

A Noviana, F F Dieny, N Rustanti, G Anjani and D N Afifah.....351

[The Abundance Of Makrozoobenthos On Different Break Water In Semarang And Demak Coastal Area](#)

A Kristiningsih, D N Sugianto, Munasik, R Pribadi and J Suprijanto.....358

[Wastewater Treatment from Batik Industries Using TiO₂ Nanoparticles](#)

Fahmi Arifan, FS Nugraheni, Hafiz Rama Devara and Niken Elsa Lianandya.....368

[The Application of Microencapsulated Phycocyanin as a Blue Natural Colorant to the Quality of Jelly Candy](#)

E N Dewi, R A Kurniasih and L Purnamayati.....374

[Mapping of trophic states based on nutrients concentration and phytoplankton abundance in Jatibarang Reservoir](#)

Siti Rudiyaniti, Sutrisno Anggoro and Arif Rahman.....381

[Characterization of Lactic Acid Bacteria \(LAB\) isolated from Indonesian shrimp paste \(terasi\)](#)

U Amalia, Sumardianto and T W Agustini.....389

[Effect of Time Length Fermentation to *Katsuobushi* Oxidation Rate As Fish Flavor Based](#)

U Amalia, L Rianingsih and I Wijayanti.....395

[Community Participation Of Coastal Area On Management Of National Park, Karimunjawa Island](#)

Bambang A Wibowo, Aryo B Aditomo and Kukuh E Prihantoko.....403

[Study of AUTO-LION \(Automatic Lighting *Rumpon*\) on Fisheries of Stationary Lift Net in Semarang, Central Java](#)

S Chairunnisa, N Setiawan, Irkham, K Ekawati, A Anwar and A DP Fitri.....410

[Biodiversity of Cryptofauna \(Decapods\) and Their Correlation with Dead Coral *Pocillopora* sp. Volume at Bunaken Island, North Sulawesi](#)

Muhammad Danie Al Malik, Nenik Kholilah, Eka Maya Kurniasih, Andrianus Sembiring, Ni Putu Dian Pertiwi, Ambariyanto Ambariyanto, Munasik Munasik and Christopher Meyer.....416

[Identification of Antipathogenic Bacterial Coral Symbionts Against *Porites Ulcerative White Spots* Disease](#)

Nor Sa'adah, Agus Sabdono and dan Diah Permata Wijayanti.....422

[Community Structure of Decapod Inhabit Dead Coral *Pocillopora* sp. in Pemuteran, Bali](#)

N P D Pertiwi, M D A Malik, N Kholilah, E M Kurniasih, A Sembiring, A W Anggoro, Ambariyanto and C Meyer.....427

[Amino Acid Profile and Volatile Flavour Compounds of Raw and Steamed Patin Catfish \(*Pangasius hypophthalmus*\) and Narrow-barred Spanish Mackerel \(*Scomberomorus commerson*\)](#)

Rusky I Pratama, I Rostini and E Rochima.....433

[Anti-Pathogenic Activity of Coral Bacteria Againsts White Plaque Disease of Coral *Dipsastraea* from Tengah Island, Karimunjawa](#)

Sakti Imam Muchlissin, Agus Sabdono and Diah Permata W.....450

[Seagrass Parameter Affect the Fish Assemblages in Karimunjawa Archipelago](#)

Endang Sri Susilo, Denny Nugroho Sugianto, Munasik, Nirwani and Chrisna Adhi Suryono.....457

[Early weaning food for infants \(0-6 months old\) in madurese people based on transcultural nursing theory](#)

Eka Mishbahatul M. Has, M. Syaltut, Tiyas Kusumaningrum and Ferry Efendi.....464

[Genetic Diversity and Geographical Gene Flow Patterns of Spawning Broadcast Coral *Lobophyllia corymbosa* in The Sulawesi Waters as A Coral Triangle Area](#)

Widyastuti Umar, Jamaluddin Jompa and Asmi Citra Malina A.R. Tassakka.....471

[Vertical Distribution of Temperature in Transitional Season II and West Monsoon in Western Pacific](#)

Hikari A H Pranoto, Kunarso and Endro Soeyanto.....480

[The Quality of Edible Film Made from Nile Tilapia \(*Oreochromis niloticus*\) Skin Gelatin with Addition of Different Type Seaweed Hydrocolloid](#)

H Deanti, J M Hulu, A. Setyaji, R N Eliyanti, K Aliya and E N Dewi.....487

[Effect of ENSO on the variability of SST and Chlorophyll-a in Java Sea](#)

Anindya Wirasatriya, Indra B Prasetyawan, Chandra D Triyono, Muslim and Lilik Maslukah.....494

[Integrated Community Based Coastal Management: Lesson From The Field](#)

Sudharto P. Hadi.....502

[Molecular Identification and Genetic Diversity of *Acropora hyacinthus* from Boo and Deer Island, Raja Ampat, West Papua](#)

DP Wijayanti, E Indrayanti, H Nuryadi, RA Dewi and A Sabdono.....505

[Seasonal and Non-Seasonal Generalized Pareto Distribution to Estimate Extreme Significant Wave Height in The Banda Sea](#)

Nursamsiah, Denny Nugroho Sugianto, Jusup Suprijanto, Munasik and Bambang Yulianto.....515

[Stolephorus sp Behavior in Different LED \(Light Emitting Diode\) Color and Light Intensities](#)

D P Fitri Aristi, I A Ramadanita, T D Hapsari and A Susanto.....522

[Inclusive blue swimming crab fishery management initiative in Betahwalang Demak, Indonesia](#)

A Ghofar, S Redjeki, H Madduppa, M Abbey and N Tasunar.....530

[The Growth and Mortality Rate of Mullet \(*Mugil dussumieri*\) on Seagrass Beds of The Teluk Awur Bay, Jepara](#)

L K Pinandita, I Riniatsih and I Irwani.....539

[Conditions of Decapods Infraorders in Dead Coral *Pocillopora* sp. at Pemuteran, Bali: Study Case 2011 and 2016](#)

Nenik Kholilah, Muhammad Danie Al Malik, Eka Maya Kurniasih, Andrianus Sembiring, Ambariyanto Ambariyanto and Christopher Mayer.....547

[The Effect of Different Feed and Stocking Densities on Growth And Survival Rate Of Blue Swimming Crablets \(*Portunus pelagicus*\)](#)

R W Ariyati, S Rejeki and R H Bosma.....554

[The Estuaries Contribution for Supplying Nutrients \(N and P\) in Jepara Using Numerical Modelling Approach](#)

Lilik Maslukah, Sri Yulina Wulandari and Indra Budi Prasetyawan.....561

[Seasonal Variations of Oceanographic Variables and Eastern Little Tuna \(*Euthynnus affinis*\) Catches in the North Indramayu Waters Java Sea](#)

Mega Syamsuddin, Sunarto and Lintang Yuliadi.....570

[The Influenced of *Lactobacillus plantarum* Starter Addition and The Length Time of Fermentation Process on The Activity of Seaweed Antioxidant *Ulva lactuca* from Krakal Beach, Yogyakarta](#)

N D Ambarsari, I R P A Rushanti, A Setyaji, T R Ningsih, N Nurhana, I Subekhi and E N Dewi.....578

[Contribution of Golden Apple Snail Flour to Enhance Omega- 3 and Omega-6 Fatty Acids Contents in Weaning Food](#)

D D Marsyha, H S Wijayanti, Nuryanto and G Anjani.....586

[Phycocyanin stability in microcapsules processed by spray drying method using different inlet temperature](#)

L Purnamayati, EN Dewi and R A Kurniasih.....599

[Freshwater Clams \(*Pilsbryoconcha Exilis*\) as an Potential Local Mineral Sources in Weaning Food to Overcome Stunting in Grobogan, Central Java, Indonesia](#)

S R Putri, Gemala Anjani, Hartanti Sandi Wijayanti and Nuryanto.....605

[Content Heavy Metal Pb, Cd In *Perna viridis* And Sediments In Semarang Bay](#)

D Suprpto, S Suryanti and N Latifah.....619

[Safely Intake Number of *Macridiscus* sp. \(Kerang Ceplos\) from Tambak Lorok Waters, Semarang, Central Java, Indonesia](#)

Eduard Meirenno Tielman, Jusup Suprijanto and Ita Widowati.....625

[Water Quality Improvement of Media Culture for Tilapia \(*Oreochromis niloticus*\) with Cleaner Production Method](#)

Haeruddin, Supriharyono and S Febrianto.....631

[Epidemiology of Child Tuberculosis \(A Cross-Sectional Study at Pulmonary Health Center Semarang City, Indonesia\)](#)

L D Saraswati, P Ginandjar, B Widjanarko and R A Puspitasari.....639

[Vaccines Cold Chain Monitoring: A Cross Sectional Study at Three District In Indonesia](#)

L D Saraswati, P Ginandjar, Budiyo, Martini, A Udiyono and Kairul.....648

[The Evidence of Imposex in Turbo sp. from Ujungpuring Waters of Jepara](#)

RAT Nuraini, R Hartati, H Endrawati, Widianingsih, MJ Rachma and RT Mahendrajaya.....656

[Antibacterial Activity Symbiotic Fungi of Marine Sponge *Axinella* sp., *Aspergillus Sydowii* on Four Growth Medium](#)

S Widyandingsih, A Trianto, OK Radjasa and K Wittriansyah.....660

[The Biophysical Characteristics Of Hatching Habitat Of Lekang Turtle \(*Lepidochelys olivacea*\) Eggs In Turtle Conservation And Education Center, Bali](#)

Suryono, R Ario, E Wibowo and G Handoyo.....668

[Mapping of Nitrate, Phospat And Zooxanthelae With Abundance Of Sea Urchins on Massive Coral Reef in Karimunjawa Island](#)

S Suryanti, C Ain and N Latifah.....673

[The Assessment of Biological and Pollution Index of Estuaries Around Port of Tanjung Emas Semarang](#)

A Tjahjono, O Wahyuni and S Purwantini.....681

[Prospective Source of Antimicrobial Compounds From Pigment Produced by Bacteria associated with Brown Alga \(Phaeophyceae \) Isolated from Karimunjawa island, Indonesia](#)

A T Lunggani, Y S Darmanto, O K Radjasa and A Sabdono.....696

[The Effect of Fermentation Time with Probiotic Bacteria on Organic Fertilizer as *Daphnia magna* Cultured Medium towards Nutrient Quality, Biomass Production and Growth Performance Enhancement](#)

Vivi Endar Herawati, Ristiawan Agung Nugroho, Pinandoyo, YS Darmanto and Johannes Hutabarat.....704

[Behind the Slow Road to Progress: Addressing Myriad Causes of the Persistence of Relatively High Maternal Mortality in Brebes Regency after the Post EMAS Program](#)

Sri Kusumo Habsari, Sofiah Sofiah and Sumardiyono Sumardiyono.....715

[Proximate content of wild and cultured eel \(*Anguilla bicolor*\) in different part of body](#)

I Wijayanti and E S Susilo.....723

[Determination of Soft Lithology Causes The Land Subsidence in Coastal Semarang City by Resistivity Methods](#)

Sugeng Widada, Sidhi Saputra and Hariadi.....730

[The Preliminary Study of Organochlorine Pesticide Residues on Sediments of Bivalvia Fishing Ground at Eastern Part of Coastal Semarang](#)

Chrisna Adhi Suryono, Subagyo, Wilis Ari Setyati, Endang Sri Susilo, Baskoro Rochaddi and Robertus Triaji Mahendrajaya.....736

[Hierarchical Synthesis of Coastal Ecosystem Health Indicators at Karimunjawa National Marine Park](#)

Johan Danu Prasetya, Ambariyanto, Supriharyono and Frida Purwanti.....741

[Reef Development on Artificial Patch Reefs in Shallow Water of Panjang Island, Central Java](#)

Munasik, Sugiyanto, Denny N Sugianto and Agus Sabdono.....748

[Saprobiic analysis to Marina coastal, Semarang city](#)

D M Nuriasih, S Anggoro and Haeruddin.....757

[Effect of Tourist Characteristic, Marine Tourism Demand, and Number of Visits to the Value Perceptions and Willingness to Pay to Environmental Marine Tourism in Ambon City](#)

Renoldy L Papilaya.....763

[Identification Sponges-Associated Fungi From Karimunjawa National Park](#)

Agus Trianto, Agus Sabdono, Baskoro Rochaddi, Desy Wulan Triningsih and Dewi Seswita Zilda.....773

[Preliminary Study Contamination of Organochlorine Pesticide \(Heptachlor\) and Heavy Metal \(Arsenic\) in Shallow Groundwater Aquifer of Semarang Coastal Areas](#)

Baskoro Rochaddi, Chrisna Adhi Suryono, Warsito Atmodjo and Alfi Satriadi.....778

[Proliferative Activity of Mammary Carcinoma Cells by AgNOR Count in C3H mice Receiving Ethanol Extract of Sponge *Haliclona* sp](#)

Lanceria Sijabat, Neni Susilaningsih, Agus Trianto and Retno Murwani.....785

[Ethanol Extract of *Haliclona* sp. Improved Histological Grade of Mammary Adenocarcinoma in C3H Mice](#)

R Murwani, A Trianto, E Wijayanti, A Ridlo and N Susilaningsih.....791

[Reduction of fecal parasites by *Arecha catechu* L. seed and *Anredera cordifolia* \(Ten\) *Steenis* leaves powder in laying hens](#)

Endang Kusumanti and Retno Murwani.....796

[The application of Environmental Friendly Technique For Seagrass Transplantation](#)

Ita Riniatsih, Retno Hartati, Hadi Endrawati, Robertus Mahendrajaya, Sri Redjeki and Widianingsih Widianingsih.....801

[The Ethanolic Extracts The Gorgonian *Isis hippuris* Inhibited the Induced Mammary Carcinoma Growth In C3H Mice](#)

Agus Trianto, Yogi Andriyas, Ali Ridlo, Sri Sedjati, Neni Susilaningsih and Retno Murwani.....808

[Effectivity Test Of Crude Protein Spore of *Myxobolus koi* as Materials Development For Sub Unit Vaccine To Prevent the Gold Fish \(*Cyprinus carpio*, Linn\) Dead by *Myxobolus*](#)

Kismiyati and G. Mahasri.....814

Abstract. The existence of *Harmful Algae Blooms* (HABs) can adversely affect the water like a mass death of fish and oxygen depletion. Some types of HABs can be contaminated with seafood and contain biotoxins that are detrimental to the health of humans who consume them. Green mussels (*Perna viridis*) has the properties of *filter feeders* so vulnerable to contamination HABs. This research was conducted to produce spatially thematic maps contaminated HABs in *P. viridis* so providing information about risk prediction *P. viridis* when consumed by humans. Sampling was done *purposively* in three (3) stations that represent the Bay Semarang namely western boundary waters (Kendal), middle (Semarang) and the eastern boundary (Demak). Sampling done two (2) times, namely East season (June -July) and the second transitional season (September) 2016. Analysis of HABs done either in water or body tissues of *P. viridis* through the analysis of *food habit*. The results shows that *P. viridis* genus positive contaminated HABs phytoplankton *Tricodesmium* and *Ceratium*. Spatial distribution and abundance of *Tricodesmium* genus *Fitoplankton* is wider and taller than the HABs *Phytoplankton* genus *Ceratium*. Group HABs are found in the tissues of *P. viridis* no potential as biotoxin that does not cause adverse health risks.

Keywords: Green Shells, HABs, Semarang's Bay

1. Introduction

Semarang's Bay is a water that stretched from Delta Bodri Kendal to Delta Wulan Demak. It's under increasing pressure as long as development of settlement areas, agriculture, aquaculture, ports and industries along the Gulf coast Semarang [1]. The used of land in the coastal area impacts on the water quality conditions in Semarang Bay and potentially be pollution [2]. The mechanism of distributing the impact from upstream toward downstream areas Semarang Bay can through the mechanism of precipitation, infiltration and runoff. There are five main watersheds that lead to Semarang Bay and within the DAS are many large and small rivers that flow into Semarang Bay [3], so many pollutants from various sources will accumulate in Semarang Bay and can affect aquatic organisms such as Green Mussels. In 2015 Semarang Bay's water showed mesotrofik until to eutrofik status that have nutrient enrichment, so potentially be make a pollution [4].

Green Mussels as a filter feeder organisms have a high vulnerability to absorb harmful contaminants, but has a privilege that adaptability or the ability to survive in a high ecological pressures without interference, metabolically Green Mussels are not disrupted by the presence of

contaminants. *P. viridis* exposed with harmful contaminants, are not able to be detected by naked eyes without laboratory analysis and further analysis [5]. The threat of contaminants it will endanger the *trophic level* organisms or humans who consume *P. viridis*. Information on the effects of pollution on biota Green mussels still very low so we need studies that examine this particular risk prediction (*Risk Assessment*) of *P. viridis*. There are two (2) contaminants that could potentially get into the body tissues of *P. viridis*, namely inorganic contaminants such as heavy metals and organic contaminants such as phytoplankton. Phytoplankton is an autotrophic organism that plays an important role in the food chain in waters, phytoplankton is a good source of food for Green Shells. However, the increase in the population of some species of phytoplankton due to nutrient enrichment waste from domestic activities, agriculture and fisheries could lead to a population explosion of phytoplankton containing toxins or better known as *Harmful Algae Blooms* (HABs) can have a negative impact. An increase in the population of toxic phytoplankton in the waters will produce toxins that can be transferred through the food chain (*food web*) or the environment. The content of toxins contained in these phytoplankton can affect the growth and even kill the organisms that consumed [6].

This study aims to determine risk prediction information based on the analysis of HABs on Green Shells spatially in Semarang Bay. This research is useful to provide information to the public about information on Green Shell Risk Prediction so as to give consideration and choice to the community to consume Green Shell caught in Semarang Bay safely.

2. Materials And Methods

2.1. Sampling Methods

The research location is in the Semarang Bay, sampling was done *purposively* in three (3) representing the Semarang Bay stations are: Station I, the waters of the western boundary of Semarang Bay (Kendal); Station II, is the central waters of Semarang Bay (Semarang); And Station III, is the eastern boundary of Semarang Bay (Demak). Sampling time is 2 (two) times in East (June-July) and transitional period II (September) in 2016. Data taken are sea water sample data: plankton to identify and study HABs concentration and water quality data Supporters. Sampling was done by *purposive P. viridis* with consideration for the uniform samples (obtained both in terms of size or age) and have same of absorption, metabolism and response to HABs. At each point of observation in station, sample's 30 shells *P. viridis* taken with a total weight of shell @ ± 5 -10 grams, in order to obtain the minimum weight for the analysis of *P. viridis* HABs on the network without a shell 25 grams.

2.2. Biotoxin analysis

Biotoxin analysis of HABs was detected through the analysis of the Food Habit *P. viridis*. The shells are prepared in advance by blending and then diluted with aquadest before being analyzed. Phytoplankton identification in the network based on the book identification *P. viridis* Yamaji essay, M, Sachlan by using a checklist.

2.3. Spatial analysis

Spatial analysis using ARGIS software with IDW interpolation method. All parameters that have been interpolated overlay done then reclass method, weighting or scoring quantitatively on each indicator both Biotoxin and Bioakumulasi. The end result of these processes is the risk prediction maps obtained spatially *P. viridis*.

3. Results And Discussion

3.1. Location Description

Semarang Bay is one of the coastal areas susceptible to environmental degradation such as coastal erosion, sedimentation and rob floods. Industries located in the vicinity of Semarang Bay like Terboyo Industrial Area, LIK Genuk, PT. Indonesia Power, Port of Tanjung Emas Semarang, Kendal Port, PT

Pokphan Sayung, PT KLI Kendal, and several other industries provide threats of pollution in Semarang Bay, so the study of potential contaminants both organic and non-organic that could harm biota and the environment. It is important to do it as a preventive measure as well as management in coastal areas.

3.2. Phytoplankton Analysis of HABs in Waters

Identification of HABs in the waters is done for comparison and supporter of the data within the network HABs *P. viridis*. Based on the list of HABs phytoplankton groups (Wiadnyana, 1996) and GEOHAB (2001), there are 2 (two) genera including HABs in Semarang Gulf waters, namely *Tricodesmium* (*Tricodesmium erythraeum*) and *Ceratium* (*Ceratium fusus*) (Figure 1). Although the percentage of phytoplankton HABs abundance is low (<15%) compared with Non-HABs Phytoplankton found in waters, the presence of HABs Phytoplankton still needs to be wary because according Nontji [7], HABs produce toxins in the body which can then be diverted to shellfish or fish through the food chain (*food chain*). The presence of toxic in the body of the shell may not cause death to the shell, but when eaten by humans it can cause health problems and even death.

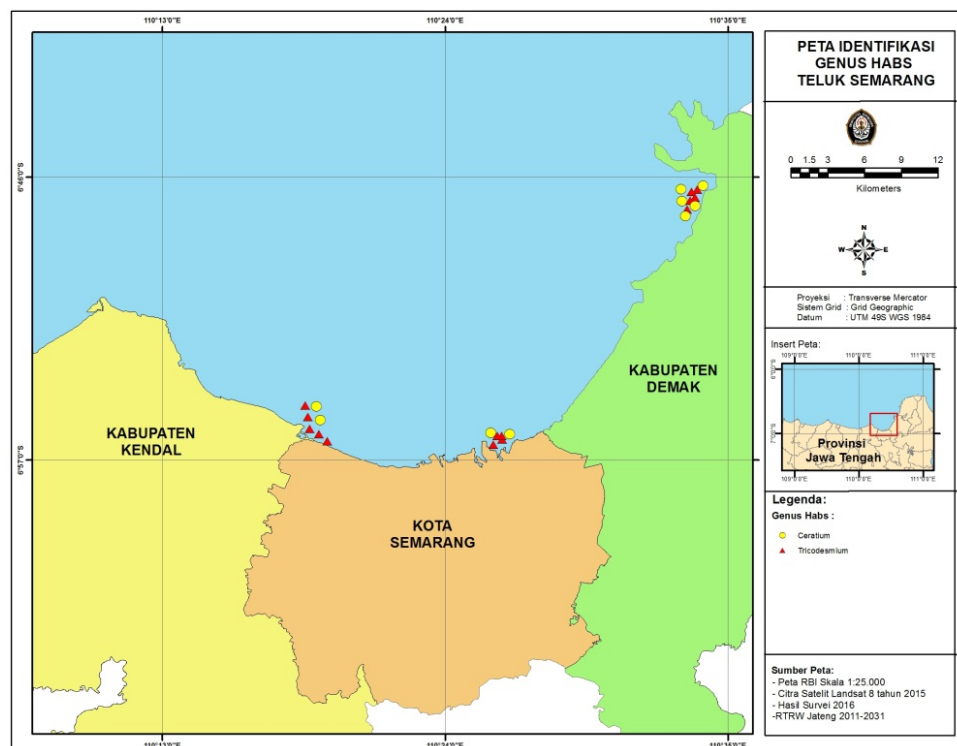

Figure 1. Map of Identification of Genus HABs in Teluk Semarang Waters

3.3. Phytoplankton Analysis of Contaminated HABs in the viridical Perna Network

Analysis of HABs contaminated phytoplankton in Green Shell tissue was analyzed by looking at the habit of eating the biota. The large percentage of Phytoplankton HABs approach of *Prefoderance Index* (%) as presented in Table 1, 2 and 3.

Description (-): unidentified, (*) Phytoplankton HABs

Analysis of the food habits of *P. viridis* at the station I (the territorial waters of Demak) has found 12 genera of phytoplankton in East season, while in the transition season II 13 genera. Plankton found on Green Shell's gastric at Station 1. Demak is relatively small compared to other stations, it is presumably because the size found at Demak station is smaller than other stations, so the absorption capacity or filter feeder capability is not as big as the shells found. Differences in the size of Shell between stations are caused by slightly different planting times (charts) on each station. Phytoplankton types of HABs found in East season just *Tricodesmium erythraeum* while in the transition season, HABs found Phytoplankton is *Tricodesmium erythraeum* and *Ceratium fusus*. The present of *Ceratium fusus* same as research in a coastal region of Sagami Bay, Japan that seasonal abundance of the dominant dinoflagellate, *Ceratium fusus*, was investigated from January 2000 to December 2003. In Sagami Bay, *C. fusus* increased significantly from April to September, and decreased from November to February, though it was found at all times through out the observation period. Rapid growth was observed over a salinity range of 24 to 30 that *C. fusus* has the ability to grow under wide ranges of water temperatures (14–28°C), salinities (20–34), and photon irradiance (50–800 $\mu\text{mol m}^{-2}\text{s}^{-1}$); it is also able to grow at low nutrient concentrations [8].

Description (-): unidentified,, (*) Phytoplankton HABs

Analysis of the food habits of *P. viridis* in station III (Kendal territorial waters) showed on East season found 25 genera were found, while in the transition season 16 genera. Species HABs Phytoplankton *Tricodesmium erythraeum* and *Ceratium fusus* found on east season and transition season. Comparison of Phytoplankton type composition in each station is presented in Figure 2.

Based on the analysis of food habits, phytoplankton HABs *Tricodesmium* contaminants in water was found also in the stomach tissue of *P. viridis*, while the genus *Ceratium* only found in *P. viridis* in Kendal waters and Demak in the transition season (Figure 2). Factors thought to cause these differences and at least *Ceratium* found on *P. viridis* are:

- The low abundance of *Ceratium* in the waters
- *Ceratium* eaten not only by *P. viridis* but other consumer level I like the fish of planktonic
- Suitability *Ceratium* size with openings and uptake *P. viridis*, if *Ceratium* size larger than *P. viridis*, it will most likely not be absorbed and filtered out in the network *P. viridis*.

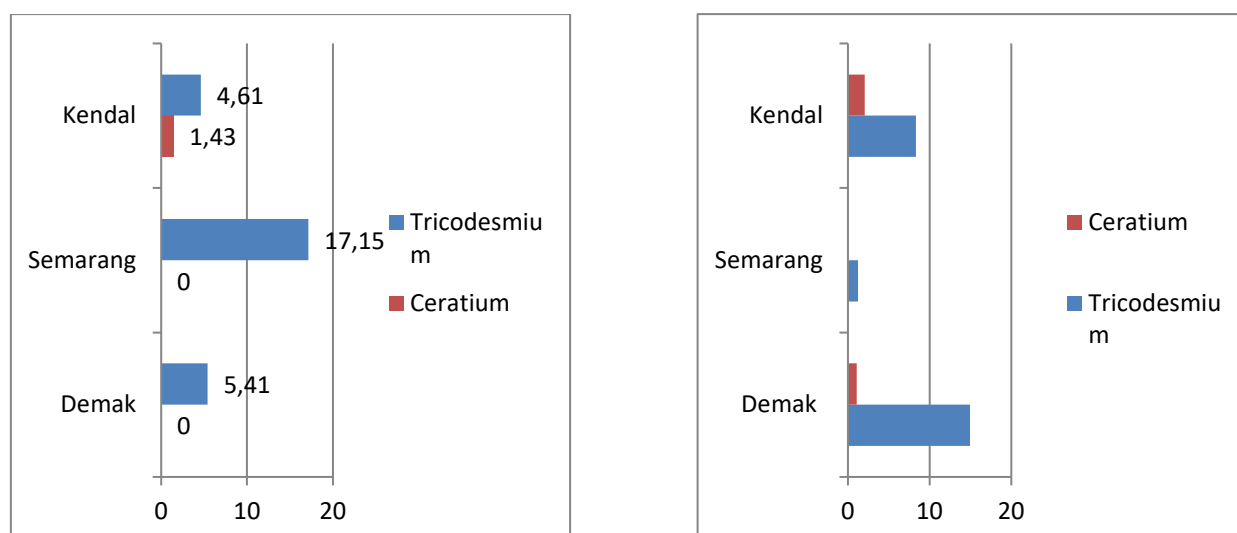

Figure 2. Composition of Phytoplankton Contaminated HABs on the Network *P. viridis* East season (A) and the Transition season (B)

HABs dominant genus of phytoplankton found in both aquatic and *P. viridis* is *Tricodesmium*. Which belongs to the Cyanophyceae class. Two (2) types of *Tricodesmium* genus that cause HABs are

Tricodesmium thiebautii and *Tricodesmium erythraeum*. Sediadi in Anggita *et al.*, [9], this type of shaped colonies *Tricodesmium* important role in the biogeochemical processes in marine waters. *Tricodesmium* type distribution. Found in subtropical marine waters to tropical marine waters. *Tricodesmium* sp. in high densities in these waters need special attention, because of the impact of *blue-green algae bloom* can cause oxygen depletion. Another characteristic *Tricodesmium* spp. to watch out for is when overflow (*blooms*) in tropical waters, which can cause a lack of oxygen resulting in the decay process that eventually can lead to the death of marine life, such as fish [10].

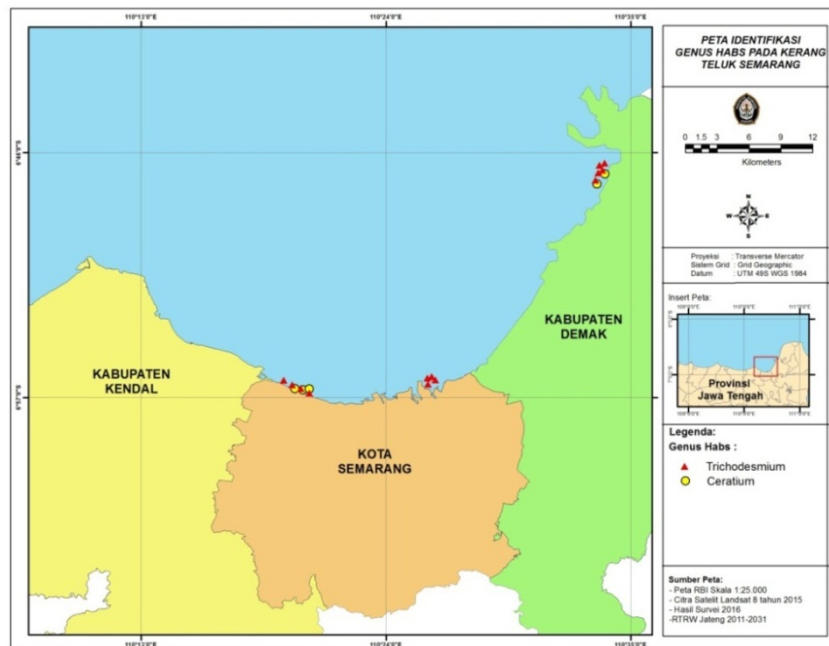

Figure 3. Mapping the identification of contaminated HABS on *P. viridis* in Semarang Bay

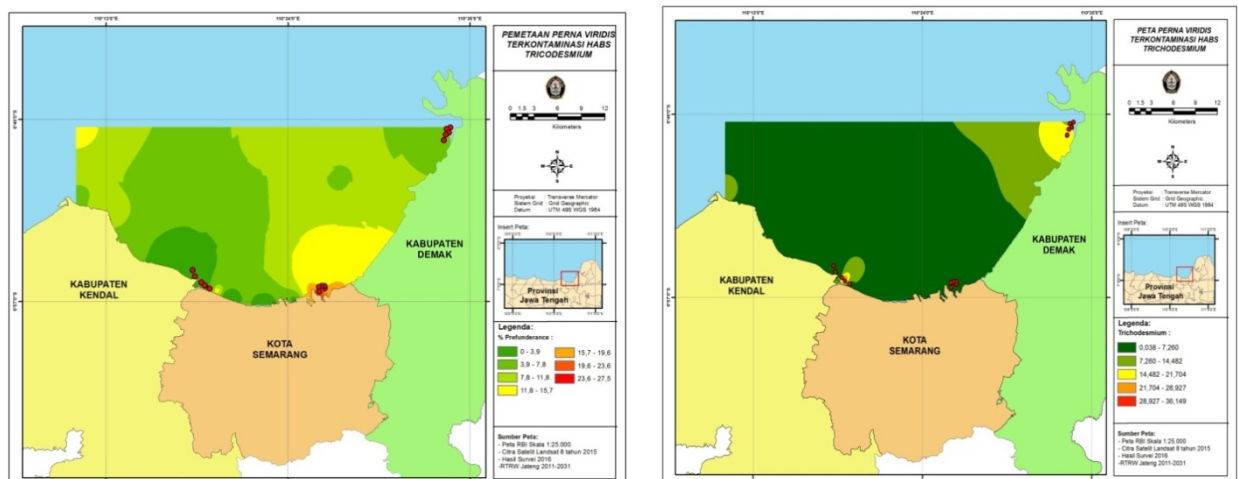

Figure 4. Mapping *P. viridis* Contaminated *Tricodesmium* HABS in East season (A) and Transition season (B)

Ceratium sp. is the second highest HABS phytoplankton genera were found either on the water or on *P. viridis* in the Semarang Bay. *Ceratium* s p. population explosion Can lead to mass death of

marine biota due to decreased oxygen levels. According to Baek *et al*[8], a population explosion of *Ceratium* sp. can cause anoxia and sea water hypoxia, in addition there are species of this genus that can injure the gills of fish, but the mechanism can not be known. *Ceratium Furca* able to compete with other phytoplankton species, especially in the availability of nutrients, sunlight, and other environmental factors [11]. *Ceratium Furca* often found in abundance and dominate other species. Therefore, *C. Furca* more often *blooming*, resulting in the mass death of marine organisms due to oxygen depletion can occur in waters and affect other resources.

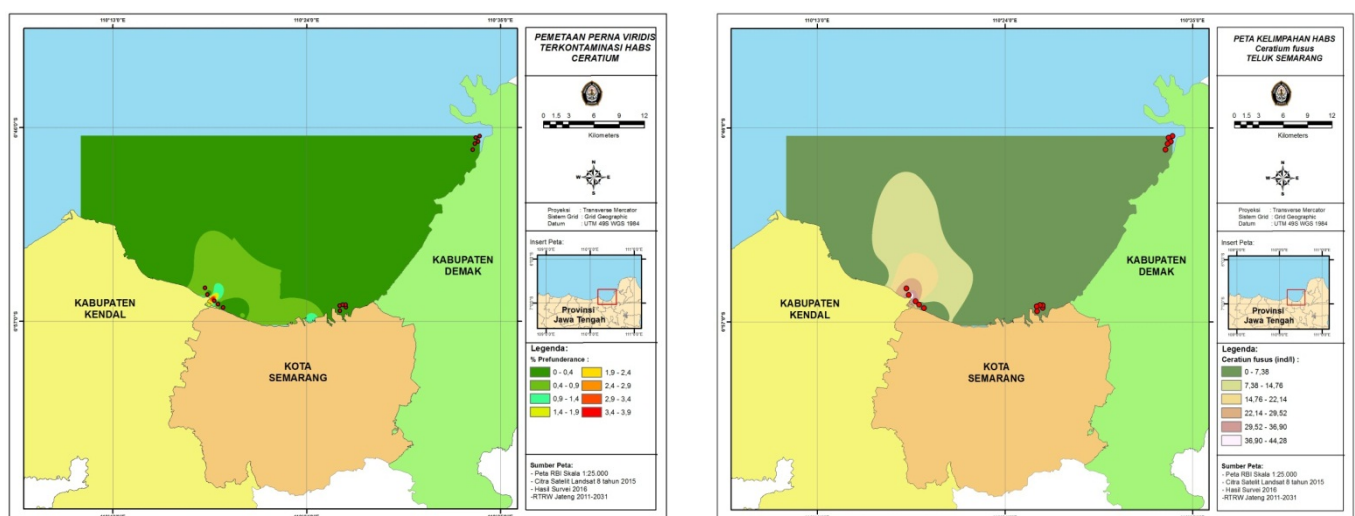

Figure 5. Mapping *P. viridis* Contaminated Ceratium HABS in East season (A) and the Transition season (B)

There are five (5) factors that cause the *blooming* of phytoplankton and harmful phytoplankton trigger HABS [12], namely: eutrophication, or nutrient enrichment; The existence of the clan *Pyrodinium* cyst at the base of the waters back into phytoplankton HABS when lifted to the surface layer through two mechanisms, namely: The mechanism through rising water masses (*upwelling*) and mechanism under the influence of tectonic earthquakes; biological, which means that the lack of predators as predators of the HABS-causing species; Large-scale hydrometeorological changes; And Heavy rains and the entry of fresh water into the sea in large numbers.

Biota cause HABS produce toxins in the body which can then be transferred to shellfish or fish through the food chain. The presence of toxic in the body of the shell may not cause death to the shell, but when eaten by humans it can cause health problems and even death [7]. Toxins produced is a stable molecule, which can not be decomposed by high-temperature cooking methods and food processing [13]. The process of accumulation of toxins takes place in the food chain, where the last consumer is the largest toxic accumulation. Results of research have shown that contaminants Tricodesmium and Ceratium positive contaminated on *P. viridis*. However, the genus has no characteristics as a biotoxin, its adverse effects the environment such as oxygen depletion.

4. Conclusion

Based on the results of the research, the conclusions obtained are as follows:

1. Green mussels (*Perna viridis*) positive contaminated HABS phytoplankton. They are from genus Ceratium and Tricodesmium, that does not have the characteristics as biotoxin
2. Spatial distribution and abundance of Tricodesmium genus Fitoplankton is wider and taller than the HABS Phytoplankton genus Ceratium.

5. Acknowledgment

Authors acknowledge the Diponegoro University for funding this research through Development and Application Research (Riset Pengembangan dan Penerapan) Scheme for fiscal year of 2016.
