We have reached a decision regarding your submission to International Journal on Advanced Science, Engineering and Information Technology. Our decision is: review is needed.

In the "Boost converter Control" is written: "The inputs for P&O algorithm were voltage and current of PV." In Figure 5 we have four inputs, so please explain this step better so that the figure is aligned with what is written in the text.

Although the article is very interesting, the conclusions are too stringent. Consider to summarize in the conclusion the objective obtained by this work and what is expected in the future.

In addition to the new version of the modified article, we ask you to submit an additional file detailing the changes and the reasons that led to that choice.

We thank you for your collaboration
