Manuscript Number (JJBS 123/R2//22) - Referee #2 Due Feb 6, 2023

,Dear Yoyok Budi Pramono

f the **manuscript**: Kindly find enclosed, a copy of **Identification of Qualitative and Quantitative Traits of the Ancestors to Produce New Strain of Indonesian Native Laying Hens**. This research work is submitted to The Jordan Journal of Biological Sciences (JJBS) to be considered for possible publication. Please advise us whether the article is appropriate for publishing in JJBS by considering the following:

1. The contents of the manuscript and your opinion will be kept confidential.
2. **We will appreciate it very much to receive your comments Feb 6, 2023.**
3. Pertinent portions of your review are supplied to the author without identification of the source. If there are remarks you do not want the author to see, please place them as indicated in Evaluation Form. This is particularly true if you question the validity of the results, the ethics of the study, and the duplication of publication.
4. **Because Journal space is at a premium, please recommend wherever shortening of text and/or deleting superfluous illustrations and references is possible.**
5. If you find the manuscript unsuitable for publication as a full paper, however, it represents a new idea, please advise us if you find it suitable for publication as a technical short note.

Best wishes and sincere regards

Prof. Manar Atoum

To:

Dear Editors of the **Jordan Journal of Biological Sciences**,

Respectfully,

Its my privilege to response. Thank you for your invitation to review this article Manuscript Number (JJBS 123/R2//22) with the title: **Identification of Qualitative and Quantitative Traits of the Ancestors to Produce New Strain of Indonesian Native Laying Hens**

Kindly send the link or file attachment of that manuscript therefore I could give the comment as soon as possible.

Thank you

Sincerely,

Dr. Yoyok Budi Pramono

Manuscript Evaluation Report- Referee 2

Manuscript Number (JJBS 123/R2//22) Due date: Feb 6, 2023

MS Title: Identification of Qualitative and Quantitative Traits of the Ancestors to Produce New Strain of Indonesian Native Laying Hens

Type of Article: Review Article **Research Paper** Case Report

PART A:

On a scale of 1 – 5 (1 being lowest and 5 being highest), rate the manuscript based on the following criteria:

NO.	Criteria	Score
1	Is the topic of the manuscript within the scope of the journal?	3
2	Does the title clearly and sufficiently reflect its content?	4
3	Are the keywords and abstracts sufficient and informative?	3
4	What is the scholarly quality of the manuscript?	3
5	Is this a new and/ or original contribution?	3
6	Is the research methodology utilized appropriate and properly administered?	3
7	Are the methods of data analysis acceptable?	3
8	Are the results and conclusions clear, adequately presented, and organized in relation to rest of manuscript?	3
9	Are the illustrations and tables necessary and in an acceptable format?	4
10	Are the interpretations/ conclusions sound and justified by the data?	3
11	Are the References in a proper format according to JJBS author Instructions?	3
12	Is the MS written in correct and satisfactory English?	3

Please rate the priority for publication of this article (10 is the highest priority, 1 is the lowest priority)

Author's Rebuttal/Statement (Suyatno: MS-123-R2-22)

Reviewer 1:

No.	Suggestion	Answer
1.	Coment 1 : Tittle : Characterization of Indonesian Native Chickens because there is no egg production trais as a basic to selection developing laying hens	Thank you. I have revised the Title according the objectives of our research that we wanted to produce a new strain of the local super laying hens from 4 native chickens from East Java. In the early study, we have characterized quantitative and qualitative traits that related to egg production. Those traits will be used as indicators in selection program that include both of quantitative and qualitative traits to estimate egg production.
2.	Coment 2 : Short and informative : breeding program, native chickens, qualitative trait, quantitative trait	Thank you. I have revised the keywords. Roy H.S. Commnets as Assoc. Editor. Please accept my apologies; I disagree with the referee's suggestion. First, the three keywords suggested by the referee (i.e., native chickens, qualitative trait, quantitative trait) are listed in the title. Including these three keywords above couldn't be effective/efficient in expanding searchable, for example, in Google Scholar. Next, why did the referee only suggest four keywords? JJBS allows up to eight keywords. Please, authors should take advantage of this provision to expand searchable in search engines to get lots of citations.
3.	Coment 3 : Please correct it because there have been local chickens from selection such as KUB, Sensi, IPB D1 and others, isn't this the result of breeding.	Yes..., thank you. I have added some new strains of super native chickens that produced by several research agent and university.
